Features of materials engineering R&D; and education in Finland after joining the EU p. 1

Effect of divalent cations in Langmuir-Blodgett films on the protection of copper against corrosion p. 9

Analysis of Adobe-Clay as an environment-friendly structural material p. 17

Laboratory experiments for studying the surface preparation and annealing processes before continuous hot dip galvanizing p. 25

Hydrogen in the plastic deformed steel p. 33

The effect of the compression on the mechanical properties of wood material p. 41

Fatigue properties of welded joints of high-carbon steels p. 47

Developing mechanical properties and electrical conductivity of Cu alloys by Jominy end-quench test p. 55

The experiences of activated tungsten inert gas (ATIG) welding applied on 1.4301 type stainless steel plates p. 63

Relationship between bending modulus and test sizes of laminated glass/polyester composites p. 71

Hydroxamic acid corrosion inhibitor for steel in aqueous solution p. 81

Microstructure and abrasive wear studies of laser clad Al-Si/SiC composite coatings p. 89

Carbon nanotubes as ceramic matrix reinforcements p. 97

Examination of calcium-phosphates prepared from eggshell p. 105

Preparation and characterisation of WO$_3$.1/3H$_2$O thin films p. 113

High performance self-reinforced polypropylene composites p. 121

Investigation of ageing phenomena in CuAlNi based shape memory alloys p. 129

MAgPP an effective coupling agent in rice husk flour filled polypropylene composites p. 137

Development of self-supporting polycrystalline diamond bridge p. 145

Development of composite structures for ballistic protection p. 151

Dispersibility of carbon nanotubes p. 161

Precipitation microstructure of ultrafine-grained Al-Zn-Mg alloys processed by severe plastic deformation p. 169

Study on the production of metal matrix composite layer by laser melt injection technology p. 177

Crystallization of Fe-Ni based amorphous alloy p. 185

Production and examination of double composites p. 191

Investigation of the debonding process in wood fiber reinforced polymer composites by acoustic emission p. 199

Thin film carbon layers with continously changing bonding properties p. 207

Determining the anisotropy coefficients of an ultra fine grained Al6082 alloy subjected to ECAP p. 215

Mechanical investigation of hemp fiber reinforced polypropylene with different types of MAPP compatibilizer p. 223

Pulse plated amorphous Fe-P thin layers for high frequency magnetic applications p. 231

Formation and structure of alkyl-phosphonic acid layers on passive iron p. 239

The corrosion study of ZrO$_2$ coatings on metals p. 247
Surface modification of polyethylene by nitrogen PIII: surface chemical and nanomechanical properties

Supercapacitor electrodes made from mixture of amorphous carbon nano-particles and carbon black

Fluid mechanical model for formation of mineral wool fibers applied in polymer composites

Raman analysis of diamond-like carbon films deposited onto corrosion resistant alloys used for coronary stent fabrication

AFM investigation of steels surfaces worn in HFRR tests

Barkhausen noise measurements in amorphous and nanocrystalline FINEMET type alloys

Examination of the orientation relationships between the main phases of duplex stainless steel by EBSD

Damage analysis of heat resistant steels

Investigation of coated coronary stents

Changes of subsurface structure of materials developed during sliding friction

Characterization and comparison of rapidly solidified Al particles mechanically milled nanostructures and their consolidated structures made by high energy rate forming (HERF) technique

Characterisation of solid supported nanostructured thin films by scanning angle reflectometry and UV-vis spectrometry

Replacement of imported drawn tubes built in heat exchangers by longitudinal seam pipes produced by DUNAFERR

Relationship between the primary cast structure and distribution of inclusions in a St52-3 type continuously cast steel slab

Evolution of special grain boundaries in austenitic steels

Effect of cladding on the reactor pressure vessel safety

Temperature dependence of barkhausen noise parameters in carbon steel

Long-term strain measuring of technical textiles by photographic method

Color etching for characterization the grain orientation in spheroidal graphite cast iron

The effect of microstructure on the wear phenomena

The sodium transport in polycrystalline alumina

Development of a novel vibrating sample magnetometer

Thermal shock fatigue process induced magnetic anisotropy

Mechanical testing of tendon

Welding investigations of modern high strength dual phase and TRIP-steel for automotive industry application

Prediction of fullerene stability using topological descriptors

Coronary stents’ materials and examinations of surface and expansion features

Metallographic investigation of TRIP steels

Micro structural aspects of unstable crack propagation in ferritic steels

Fatigue behaviour of railway wheel steels under constant and variable amplitude loading

Main aspects at the design and loading test of large scale trusses to achieve a reasonable structural safety
Comparison of different theoretical models to experimental data on viscosity of binary liquid alloys

Comparison of measured phase volumes with calculated ones created by TTT-CCT diagram transformation

Virtual TTT diagrams generated by multi-linear regression analysis

A novel approach of quenchant evaluation by applying quality functions

Wear analysis of functionally gradient composite materials by FE modelling of microhardness measurements and wear tests

On the wettability, encapsulation and surface phase transition in monotectic liquid metallic systems

Study of the tempcore process for the production of high resistance reinforcing rods

Aperiodic deformation occurring as a result of thermoplastic instability of metals

Intercritical interrupted jominy test

3D characterization of continuously cast slabs

On the topological characterization of 3-D polyhedral microstructures

On the temperature rate dependent transformation processes

Simulation of 3-dimensional cell population growth processes in polyhedral cellular systems

Visualisation of the melt flow under rotating magnetic field

Thermal and metallurgical modelling of laser transformation hardened steel parts

Evaluation of steel hardenability by JM [actual symbol not reproducible]-test

Numerical analysis of sliding friction behaviour of rubber

Functionalization of multi-walled carbon nanotubes

Development and manufacturing of coronary stents in Hungary

Choosing a laser-cutting technology to be applied to a deep-drawn product

The state of differently heat-treated 12% Ni maraging steel after laser remelting

Laser shock processing of the maraging steel surface

Influences of manufacturing technology on the mechanical properties of silicone rubber structures

The EAF slag as construction material

The role of niobium in lightweight vehicle construction

High performance microcoulometry

Actual feed rate per tooth at micro milling

Development of scrap evaluation algorithm to optimize the converter charge composition

High elasticity strain gauge made from conductive silicone rubber
