Contributing Authors

Preface

Introduction

Molecular and Cellular Organization of the Central Nervous System: Implications for New Therapeutics

Mechanisms of Neuronal Injury and Death

Calcium and Glutamate-Induced Cortical Neuronal Death

Glutamate Receptors and Excitotoxicity

Cellular Physiology of Hypoxia of the Mammalian Central Nervous System

Mitochondrial Dysfunction as a Mechanism of CNS Injury

Free Radicals in CNS Injury

Neuronal Injury in Specific Disease States

Strokes Involving Gray Matter: Studies on In Situ Models of Cerebral Ischemia

Anoxic Injury of Central Myelinated Axons: Ionic Mechanisms and

The Ischemic Penumbra in Stroke: Prospects for Analysis by Nuclear Magnetic Resonance Spectroscopy

Role of Excitotoxins in Heredito-Degenerative Neurologic Diseases

The Therapeutic Window for Methylprednisolone Treatment of Acute Spinal Cord Injury: Implications for Cell Injury Mechanisms

Therapeutic Strategies

Emerging Strategies for the Treatment of Ischemic Brain Injury

The Design and Appraisal of Randomized Clinical Trials in Cerebrovascular Disease and CNS Trauma

Pharmacological Modification of Axon Membrane Molecules and Cell Transplantation as Approaches to the Restoration of Conduction in Demyelinated Axons

Current Antisense Nucleic Acid Strategies for Manipulating Neuronal and Glial Cells

Cellular and Molecular Replacement

Factors Affecting Proviral Expression in Primary Cells Grafted into the CNS

Cellular Replacement of Dopamine Deficit in Parkinson's Disease Using Human Fetal Mesencephalic Tissue: Preliminary Results in Four Patients

Intracerebral Transplantation: Prospects for Neuronal Replacement in Neurodegenerative Diseases
