Is it a Tree, a DAG, or a Cyclic Graph? A Shape Analysis for Heap-Directed Pointers in C
Solving Shape-Analysis Problems in Languages with Destructive Updating
Points-to Analysis in Almost Linear Time
What Are Principal Typings and What Are They Good For?
Putting Type Annotations to Work
Using Parameterized Signatures to Express Modular Structure
Faster Checking of Software Specifications by Eliminating Isomorphs
Optimization and Relaxation in Constraint Logic Languages
Pure versus Impure LISP
On the Complexity of Beta-Reduction
Filter Fusion
'C: A Language for High-Level, Efficient, and Machine-Independent Dynamic Code Generation
A General Approach for Run-Time Specialization and its Application to C
Discovering Auxiliary Information for Incremental Computation
From Region Inference to von Neumann Machines via Region Representation Inference
A Practical and Flexible Flow Analysis for Higher-Order Languages
Trace-Based Program Analysis
Iterated Register Coalescing
Generating Machine Specific Optimizing Compilers
Minimum Cost Interprocedural Register Allocation
Type-Directed Partial Evaluation
A Modal Analysis of Staged Computation
Typed Closure Conversion
Revisiting Catamorphisms over Datatypes with Embedded Functions (or, Programs form Outer Space)
Concurrent Haskell
A Provably Time-Efficient Parallel Implementation of Full Speculation
Static Analysis to Reduce Synchronization Costs in Data-Parallel Programs
Functional Computation as Concurrent Computation
Composing Processes
Linearity and the Pi-Calculus
The Reflexive CHAM and the Join-Calculus
Bisimilarity for a First-Order Calculus of Objects with Subtyping
An Interpretation of Objects and Object Types
Proving the Correctness of Reactive Systems Using Sized Types
