Dictionaries using variable-length keys and data, with applications

Lower bounds on the size of selection and rank indexes

Dynamic dictionary matching and compressed suffix trees

A categorization theorem on suffix arrays with applications to space efficient text indexes

Towards a complete characterization of tries

Inoculation strategies for victims of viruses and the sum-of-squares partition problem

Marriage, honesty, and stability

Market equilibria for homothetic, quasi-concave utilities and economies of scale in production

On the polynomial time computation of equilibria for certain exchange economies

Computing equilibria in multi-player games

On distance scales, embeddings, and efficient relaxations of the cut cone

Embeddings of negative-type metrics and an improved approximation to generalized sparsest cut

The complexity of low-distortion embeddings between point sets

Approximation algorithms for low-distortion embeddings into low-dimensional spaces

A tight threshold for metric Ramsey phenomena

The interface between computational and combinatorial geometry

Multiple-source shortest paths in planar graphs

Computing the shortest path: A* search meets graph theory

Finding large cycles in Hamiltonian graphs

Approximating connectivity augmentation problems

Primal-dual approach for directed vertex connectivity augmentation and generalizations

Multidimensional balanced allocations

Online client-server load balancing without global information

Job shop scheduling with unit processing times

Approximating the average response time in broadcast scheduling

Improved schedule for radio broadcast

On levels in arrangements of surfaces in three dimensions

Distributions of points in the unit-square and large k-gons

On geometric permutations induced by lines transversal through a fixed point

Subgradient and sampling algorithms for $l_1$ regression

Approximation hardness of optimization problems in intersection graphs of $d$-dimensional boxes

Isomorphism and embedding problems for infinite limits of scale-free graphs

Adversarial deletion in a scale free random graph process

The influence of search engines on preferential attachment

On the spread of viruses on the Internet

Analyzing and characterizing small-world graphs

Substring compression problems
Optimizing Markov models with applications to triangular connectivity coding p. 331
Dotted interval graphs and high throughput genotyping p. 339
Algorithms for combining rooted triplets into a galled phylogenetic network p. 349
Unknotting is in AM [actual symbol not reproducible] co-AM p. 359
A constant approximation algorithm for the one-warehouse multi-retailer problem p. 365
Sharing the cost more efficiently : improved approximation for multicommodity rent-or-buy p. 375
Online convex optimization in the bandit setting : gradient descent without a gradient p. 385

Adaptivity and approximation for stochastic packing problems p. 395
Theory of semidefinite programming for sensor network localization p. 405
An O(VE) algorithm for ear decompositions of matching-covered graphs p. 415
Popular matchings p. 424
Dominator tree verification and vertex-disjoint paths p. 433
Online topological ordering p. 433
All maximal independent sets and dynamic dominance for sparse graphs p. 451
LP decoding achieves capacity p. 460
Maximum-likelihood decoding of Reed-Solomon codes in NP-hard p. 470
Collecting correlated information from a sensor network p. 479
Deterministic network coding by matrix completion p. 489
Network coding : does the model need tuning? p. 499
Pianos are not flat : rigid motion planning in three dimensions p. 505
A constant-factor approximation algorithm for optimal terrain guarding p. 515
Ray shooting amid balls, farthest point from a line, and range emptiness searching p. 525

Space-time tradeoffs for approximate spherical range counting p. 535
Online conflict-free coloring for intervals p. 545
Loop quantum gravity p. 555
Approximation algorithms for cycle packing problems p. 556
Approximating the smallest k-edge connected spanning subgraph by LP-rounding p. 562
Partial covering of hypergraphs p. 572
Approximating vertex cover on dense graphs p. 582
Bidimensionality : new connections between FPT algorithms and PTASs p. 590
Limitations of cross-monotonic cost sharing schemes p. 602
A group-strategyproof mechanism for Steiner forests p. 612
Collusion-resistant mechanisms for single-parameter agents p. 620
A multiple-choice secretary algorithm with applications to online auctions p. 630
Rounds vs. queries trade-off in noisy computation p. 632
Distributed approaches to triangulation and embedding p. 640
Ordinal embeddings of minimum relaxation : general properties, trees, and ultrametrics p. 650
Sparse source-wise and pair-wise distance preservers p. 660
Lower bound for sparse Euclidean spanners p. 670
New constructions of \((\alpha,\beta)\)-spanners and purely additive spanners p. 672

Graphs excluding a fixed minor have grids as large as treewidth, with combinatorial and algorithmic applications through bidimensionality p. 682

Dissections and trees, with applications to optimal mesh encoding and to random sampling p. 690

The expected value of random minimal length spanning tree of a complete graph p. 700

Girth restrictions for the 5-flow conjecture p. 705

Linear equations, arithmetic progressions and hypergraph properly testing p. 708

The relative worst order ratio applied to paging p. 718

Strictly convex drawings of planar graphs p. 728

External-memory exact and approximate all-pairs shortest-paths in undirected graphs p. 735

Graph distances in the streaming model: the value of space p. 745

Lower bounds for external algebraic decision trees p. 755

On hierarchical routing in doubling metrics p. 762

Fast convergence of selfish rerouting p. 772

Oblivious routing on node-capacitated and directed graphs p. 782

Distributed online call control on general networks p. 791

An optimal online algorithm for packet scheduling with agreeable deadlines p. 801

An optimal dynamic interval stabbing-max data structure? p. 803

Self-adjusting top trees p. 813

An optimal bloom filter replacement p. 823

Efficient hashing with lookups in two memory accesses p. 830

Improved range-summable random variable construction algorithms p. 840

A spectral heuristic for bisecting random graphs p. 850

Complete partitions of graphs p. 860

Two algorithms for general list matrix partitions p. 870

How fast is the k-means method? p. 877

On approximating the depth and related problems p. 886

Multicoloring until disk graphs on triangular lattice points p. 895

An asymptotic approximation scheme for multigraph edge coloring p. 897

Computing minimal triangulations in time \(O(n[\text{superscript } \alpha] \log n) = o(n[\text{superscript } 2.376])\) p. 907

Finding the shortest bottleneck edge in a parametric minimum spanning tree p. 917

On the random 2-stage minimum spanning tree p. 919

Rigorous analysis of heuristics for NP-hard problems p. 927

An improved approximation algorithm for virtual private network design p. 928

Network design for information networks p. 933

On the approximability of some network design problems p. 943

Approximating k-median with non-uniform capacities p. 952

Improved approximation for universal facility location p. 959

The cover time of two classes of random graphs p. 961
Coupling with the stationary distribution and improved sampling for colorings and independent sets  p. 971
Sampling regular graphs and a peer-to-peer network  p. 980
The bin-covering technique for thresholding random geometric graph properties  p. 989
Random planar graphs with n nodes and a fixed number of edges  p. 999
Provably good moving least squares  p. 1008
Manifold reconstruction from point samples  p. 1018
Delaunay triangulations approximate anchor hulls  p. 1028
Greedy optimal homotopy and homology generators  p. 1038
Controlled perturbation for Delaunay triangulations  p. 1047
Near-independence of permutations and an almost sure polynomial bound on the diameter of the symmetric group  p. 1057
Matrix rounding with low error in small submatrices  p. 1067
Can the TPR1 structure help us to solve the algebraic eigenproblem?  p. 1069
Optimal random number generation from a biased coin  p. 1079
A new look at survey propagation and its generalizations  p. 1089
Coins make quantum walks faster  p. 1099
Quantum algorithms for the triangle problem  p. 1109
The hidden subgroup problem and permutation group theory  p. 1118
Testing hierarchical systems  p. 1126
Conformance testing in the presence of multiple faults  p. 1136
Online ascending auctions for gradually expiring items  p. 1146
Near-optimal online auctions  p. 1156
On profit-maximizing envy-free pricing  p. 1164
Improved recommendation systems  p. 1174
Selfish routing with atomic players  p. 1184
