Voltaic Theory, Radioactivity, Electrons
On Volta-convection by flame
Electrification of air by flame
On the velocity of Crookes' cathode stream
On the electrification of air
Preliminary experiments to find if subtraction of water from air electrifies it
Electrification of air and other gases by bubbling through water and other liquids

On the diselectrification of air
On the electrification of air
On the electrification and diselectrification of air and other gases
On the generation of longitudinal waves in ether
On Lippmann's colour photography with obliquely incident light
On measurements of electric currents through air at different densities down to one five-millionth of the density of ordinary air
On the communication of electricity from electrified steam to air
Experiments on the electrical phenomena produced in gases by Röntgen rays, by ultra-violet light, and by uranium
Continuation of experiments on electric properties of uranium
On electrical properties of fumes proceeding from flames and burning charcoal
Contact electricity of metals
Note to 'The electrification of air by uranium and its compounds'
Electrification of air, of vapour of water, and of other gases
Leakage from electrified metal plates and points placed above and below uninsulated flames
Nineteenth century clouds over the dynamical theory of heat and light
On the motion produced in an infinite elastic solid by the motion through the space occupied by it of a body acting on it only by attraction or repulsion

On the duties of ether for electricity and magnetism
Aepinus atomized
Becquerel rays and radioactivity
Contribution to B.A. discussion on the nature of the emanations from radium
On the destruction of cambric by radium emanations
Electrical insulation in 'vacuum'
Plan of a combination of atoms having the properties of polonium or radium
On the statistical kinetic equilibrium of ether in ponderable matter at any temperature
Plan of an atom to be capable of storing an electron with enormous energy for radioactivity
An attempt to explain the radioactivity of radium
On the motions of ether produced by collisions of atoms or molecules, containing or not containing electrons
Navigations and Tides
On the determination of a ship's place from observations of altitude
Amended rule for working out Sumner's method of finding a ship's place
On a septum permeable to water and impermeable to air, with practical applications to a navigational depth-gauge
On the new navigational sounding machine and depth-gauge
The tide gauge, tidal harmonic analyser, and tide predicter
Miscellaneous
Archibald Smith, and the magnetism of ships
H. C. Fleeming Jenkin
The scientific work of Sir George Stokes [Obituary notice]
James Watt
Peter Guthrie Tait
Address as Chancellor at Glasgow
