

Preface	p. xv
Acknowledgements	p. xix
About the companion website	p. xxi
Measure-Theoretical Foundations of Probability Theory	p. 1
Measure	p. 3
Introductory examples	p. 3
\mathcal{L} -Algebra and measurable space	p. 4
\mathcal{L} -Algebra generated by a set system	p. 9
\mathcal{L} -Algebra of Borel sets on \mathbb{R}^n	p. 12
\mathcal{L} -Algebra on a Cartesian product	p. 14
\cap -Stable set systems that generate a \mathcal{L} -algebra	p. 15
Measure and measure space	p. 17
\mathcal{L} -Additivity and related properties	p. 18
Other properties	p. 19
Specific measures	p. 20
Dirac measure and counting measure	p. 21
Lebesgue measure	p. 22
Other examples of a measure	p. 23
Finite and \mathcal{L} -finite measures	p. 24
Product measure	p. 24
Continuity of a measure	p. 25
Specifying a measure via a generating system	p. 27
\mathcal{L} -Algebra that is trivial with respect to a measure	p. 28
Proofs	p. 28
Exercises	p. 31
Solutions	p. 32
Measurable mapping	p. 42
Image and inverse image	p. 42
Introductory examples	p. 43
Example 1: Rectangles	p. 43
Example 2: Flipping two coins	p. 45
Measurable mapping	p. 47
Measurable mapping	p. 47
\mathcal{L} -Algebra generated by a mapping	p. 52
Final \mathcal{L} -algebra	p. 55
Multivariate mapping	p. 55
Projection mapping	p. 57
Measurability with respect to a mapping	p. 58
Theorems on measurable mappings	p. 59
Measurability of a composition	p. 60
Theorems on measurable functions	p. 62

Equivalence of two mappings with respect to a measure	p. 65
Image measure	p. 69
Proofs	p. 72
Exercises	p. 78
Solutions	p. 78
Integral	p. 87
Definition	p. 87
Integral of a nonnegative step function	p. 87
Integral of a nonnegative measurable function	p. 92
Integral of a measurable function	p. 97
Properties	p. 100
Integral of ζ -equivalent functions	p. 102
Integral with respect to a weighted sum of measures	p. 104
Integral with respect to an image measure	p. 106
Convergence theorems	p. 107
Lebesgue and Riemann integral	p. 108
Density	p. 110
Absolute continuity and the Radon-Nikodym theorem	p. 112
Integral with respect to a product measure	p. 114
Proofs	p. 115
Exercises	p. 124
Solutions	p. 125
Probability. Random Variable, and its Distribution	p. 131
Probability measure	p. 133
Probability measure and probability space	p. 133
Definition	p. 133
Formal and substantive meaning of probabilistic terms	p. 134
Properties of a probability measure	p. 134
Examples	p. 135
Conditional probability	p. 138
Definition	p. 138
Filtration and time order between events and sets of events	p. 139
Multiplication rule	p. 141
Examples	p. 142
Theorem of total probability	p. 143
Bayes' theorem	p. 144
Conditional-probability measure	p. 145
Independence	p. 149
Independence of events	p. 149
Independence of set systems	p. 150
Conditional independence given an event	p. 151

Conditional independence of events given an event	p. 152
Conditional independence of set systems given an event	p. 152
Proofs	p. 154
Exercises	p. 156
Solutions	p. 157
Random variable, distribution, density, and distribution function	p. 162
Random variable and its distribution	p. 162
Equivalence of two random variables with respect to a probability measure	p. 168
Identical and P-equivalent random variables	p. 168
P-equivalence, $P^{\sup}B^{\sup}$ -equivalence, and absolute continuity	p. 171
Multivariate random variable	p. 174
Independence of random variables	p. 176
Probability function of a discrete random variable	p. 182
Probability density with respect to a measure	p. 185
General concepts and properties	p. 186
Density of a discrete random variable	p. 187
Density of a bivariate random variable	p. 188
Uni- or multivariate real-valued random variable	p. 189
Distribution function of a univariate real-valued random variable	p. 189
Distribution function of a multivariate real-valued random variable	p. 192
Density of a continuous univariate real-valued random variable	p. 193
Density of a continuous multivariate real-valued random variable	p. 195
Proofs	p. 196
Exercises	p. 204
Solutions	p. 205
Expectation, variance, and other moments	p. 208
Expectation	p. 208
Definition	p. 208
Expectation of a discrete random variable	p. 209
Computing the expectation using a density	p. 211
Transformation theorem	p. 212
Rules of computation	p. 216
Moments, variance, and standard deviation	p. 216
Proofs	p. 221
Exercises	p. 221
Solutions	p. 222
Linear quasi-regression, covariance, and correlation	p. 225
Linear quasi-regression	p. 225
Covariance	p. 228
Correlation	p. 232
Expectation vector and covariance matrix	p. 235

Random vector and random matrix	p. 235
Expectation of a random vector and a random matrix	p. 235
Covariance matrix of two multivariate random variables	p. 237
Multiple linear quasi-regression	p. 238
Proofs	p. 240
Exercises	p. 245
Solutions	p. 245
Some distributions	p. 254
Some distributions of discrete random variables	p. 254
Discrete uniform distribution	p. 254
Bernoulli distribution	p. 255
Binomial distribution	p. 256
Poisson distribution	p. 258
Geometric distribution	p. 260
Some distributions of continuous random variables	p. 262
Continuous uniform distribution	p. 262
Normal distribution	p. 264
Multivariate normal distribution	p. 267
Central χ^2 -distribution	p. 271
Central t-distribution	p. 273
Central F-distribution	p. 274
Proofs	p. 276
Exercises	p. 280
Solutions	p. 281
Conditional Expectation and Regression	p. 285
Conditional expectation value and discrete conditional expectation	p. 287
Conditional expectation value	p. 287
Transformation theorem	p. 290
Other properties	p. 292
Discrete conditional expectation	p. 294
Discrete regression	p. 295
Examples	p. 296
Proofs	p. 301
Exercises	p. 302
Solutions	p. 302
Conditional expectation	p. 305
Assumptions and definitions	p. 305
Existence and uniqueness	p. 307
Uniqueness with respect to a probability measure	p. 308
A necessary and sufficient condition of uniqueness	p. 309
Examples	p. 310

Rules of computation and other properties	p. 311
Rules of computation	p. 311
Monotonicity	p. 314
Convergence theorems	p. 314
Factorization, regression, and conditional expectation value	p. 316
Existence of a factorization	p. 316
Conditional expectation and mean squared error	p. 317
Uniqueness of a factorization	p. 318
Conditional expectation value	p. 319
Characterizing a conditional expectation by the joint distribution	p. 322
Conditional mean independence	p. 323
Proofs	p. 328
Exercises	p. 331
Solutions	p. 331
Residual, conditional variance, and conditional covariance	p. 340
Residual with respect to a conditional expectation	p. 340
Coefficient of determination and multiple correlation	p. 345
Conditional variance and covariance given a \mathcal{G} -algebra	p. 350
Conditional variance and covariance given a value of a random variable	p. 351
Properties of conditional variances and covariances	p. 354
Partial correlation	p. 357
Proofs	p. 359
Exercises	p. 360
Solutions	p. 361
Linear regression	p. 369
Basic ideas	p. 369
Assumptions and definitions	p. 371
Examples	p. 373
Linear quasi-regression	p. 378
Uniqueness and identification of regression coefficients	p. 380
Linear regression	p. 381
Parameterizations of a discrete conditional expectation	p. 383
In variance of regression coefficients	p. 387
Proofs	p. 388
Exercises	p. 390
Solutions	p. 391
Linear logistic regression	p. 393
Logit transformation of a conditional probability	p. 393
Linear logistic parameterization	p. 396
A parameterization of a discrete conditional probability	p. 398
Identification of coefficients of a linear logistic parameterization	p. 399

Linear logistic regression and linear logit regression	p. 400
Proofs	p. 407
Exercises	p. 409
Solutions	p. 409
Conditional expectation with respect to a conditional-probability measure	p. 412
Introductory examples	p. 413
Assumptions and definitions	p. 417
Properties	p. 423
Partial conditional expectation	p. 424
Factorization	p. 426
Conditional expectation value with respect to $P^{\sup}B^{\sup}$	p. 426
Uniqueness of factorizations	p. 427
Uniqueness	p. 428
A necessary and sufficient condition of uniqueness	p. 428
Uniqueness with respect to P and other probability measures	p. 430
Necessary and sufficient conditions of P -uniqueness	p. 430
Properties related to P -uniqueness	p. 433
Conditional mean independence with respect to $P^{\sup}Z=z^{\sup}$	p. 437
Proofs	p. 439
Exercises	p. 444
Solutions	p. 444
Effect functions of a discrete regressor	p. 450
Assumptions and definitions	p. 450
Intercept function and effect functions	p. 451
Implications of independence of X and Z for regression coefficients	p. 454
Adjusted effect functions	p. 456
Logit effect functions	p. 460
Implications of independence of A' and Z for the logit regression coefficients	p. 463
Proofs	p. 466
Exercises	p. 468
Solutions	p. 469
Conditional Independence and Conditional Distribution	p. 471
Conditional independence	p. 473
Assumptions and definitions	p. 473
Two events	p. 474
Two sets of events	p. 475
Two random variables	p. 476
Properties	p. 477
Conditional independence and conditional mean independence	p. 485
Families of events	p. 487
Families of set systems	p. 488

Families of random variables	p. 489
Proofs	p. 493
Exercises	p. 501
Solutions	p. 501
Conditional distribution	p. 505
Conditional distribution given a ζ -algebra or a random variable	p. 505
Conditional distribution, given a value of a random variable	p. 508
Existence and uniqueness	p. 511
Existence	p. 511
Uniqueness of the functions $P_{Y A}$ (.A')	p. 512
Common null set uniqueness of a conditional distribution	p. 513
Conditional-probability measure given a value of a random variable	p. 516
Decomposing the joint distribution of random variables	p. 518
Conditional independence and conditional distributions	p. 520
Expectations with respect to a conditional distribution	p. 525
Conditional distribution function and probability density	p. 528
Conditional distribution and Radon-Nikodym density	p. 531
Proofs	p. 534
Exercises	p. 553
Solutions	p. 553
References	p. 557
List of Symbols	p. 559
Author Index	p. 569
Subject Index	p. 570
