

Preface	
Acknowledgments	
Introduction	p. 1
Axiomatic consistency of Quantum Chemistry	p. 1
Scope of These Studies	p. 2
Insufficiencies of Quantum Chemistry for Molecular Structures	p. 5
Insufficiency of Quantum Chemistry for Chemical Reactions	p. 11
Insufficiencies of Quantum Chemistry for Biological Structures	p. 12
The Central Topic of Study of This Monograph	p. 14
Catastrophic Inconsistencies of Generalized Nonunitary Theories on Conventional Mathematics	p. 19
Hadronic Mechanics	p. 27
Hadronic Superconductivity	p. 34
Elements of ISO-, GENO-, and Hyper-Mathematics and Their Isoduals	p. 59
Elements of Isomathematics	p. 61
Elements of Genomathematics	p. 81
Hypermathematics	p. 97
Isodual Mathematics	p. 99
Foundations of Hadronic Chemistry	p. 107
Classical Foundations of Hadronic Chemistry	p. 111
Operator Foundations of Hadronic Chemistry	p. 130
Isochemical Model of the Hydrogen Molecule	p. 155
Isochemical Model of Molecular Bonds	p. 158
The Limit Case of Stable Isoelectronium	p. 168
Isochemical Model of the Hydrogen Molecule with Stable Isoelectronium	p. 174
Exactly Solvable, Three-Body, Isochemical Model of the Hydrogen Molecule	p. 177
Isochemical Model of the Hydrogen Molecule with Unstable Isoelectronium	p. 180
Gaussian Approximation of the Isochemical Model of the Hydrogen Molecule as a Four-Body System	p. 183
Isochemical Calculations for the Three-Body H <sub>2</sub> Molecule	p. 195
Isochemical Calculations for the Four-Body H <sub>2</sub> Molecule	p. 196
Isochemical Model of the Water Molecule	p. 205
Main Characteristics of Water	p. 211
Exactly Solvable Model of the Water Molecule with Stable Isoelectronium	p. 215
Gaussian Approximation of the Isochemical Model of the Water Molecule with Unstable Isoelectronium	p. 219
The Method	p. 223
The Main Results	p. 226
Variational Calculations of Isochemical Molecular Models	p. 233
Aringazin-Kucherenko Study of the Restricted, Three-Body Isochemical Model of the Hydrogen Molecule	p. 234

Aringazin Variational Study of the Four-Body Isochemical Model of the Hydrogen Molecule	p. 239
Application of Hadronic Chemistry to New Clean Energies and Fuels	p. 251
Alarming Environmental Problems Caused by Gasoline and Coal Combustion	p. 254
Alarming Environmental Problems Caused by Natural Gas Combustion	p. 257
Alarming Environmental Problems Caused by Hydrogen Combustion, Fuel Cells and Electric Cars	p. 258
The Need for New, Environmentally Acceptable Primary Sources of Electricity	p. 261
Insufficiencies of Quantum Mechanics, Superconductivity, and Chemistry for the Solution of Current Environmental Problems	p. 262
The New Clean Primary Energies Predicted by Hadronic Mechanics, Superconductivity and Chemistry	p. 263
PlasmaArcFlow Reactor for the Conversion of Liquid Waste into the Clean Burning Magnegas	p. 279
Surpassing by Magnegas Exhaust of EPA Requirements without Catalytic Converter	p. 283
Anomalous Chemical Composition of Magnegas	p. 288
Anomalous Energy Balance of Hadronic Molecular Reactors	p. 291
App. 7.A	p. 300
The New Chemical Species of Magnecules	p. 303
The Hypothesis of Magnecules	p. 305
The Five Force Fields Existing in Atoms	p. 308
Magnecules Internal Bonds	p. 310
Production of Magnecules in Gases, Liquids and Solids	p. 316
New Molecules Internal Bonds	p. 322
Main Features of Magnecules to be Detected	p. 324
Necessary Conditions for the Correct Detection of Molecules and Magnecules	p. 326
Experimental Evidence of Gas Magnecules	p. 337
Experimental Evidence of Liquid Magnecules	p. 354
Experimental Verification of Mutated Physical Characteristics	p. 364
Aringazin's Studies on Toroidal Orbits of the Hydrogen Atom under an External Magnetic Field	p. 376
Index	p. 393
