Preface

Superconductivity of the Ti-D and Zr-D Alloys Under Pressure

Effect of Interstitial Hydrogen and Nitrogen on the Magnetocrystalline Anisotropy and Magnetostriiction of Rare-Earth-Transition-Metal Intermetallics

Study of Hydrogen Sulfide Dissociation Over Fe-Ti Based Alloy

Hydrogen Sensor for Cryogenic Vacuum Objects

Hydrogen Production from Thermocatalytic Hydrogen Sulfide Decomposition

Huge Diffusion Electromotive Force in Zirconium Hydrides

The Technological Aspects of the Nickel-Iron Accumulator Batteries Recycling

Study of Structure and Hydrogen Absorption Properties of Alloys of Ti-Mn-V System

Calorimetric Investigation of Hydrogen Interaction with Intermetallic Compounds at Pressure up to 2000 atm

The Rolling of the Strip Metal-Hydride Electrodes

Investigation of Hydrogen Sorption Properties of TiMn[subscript 2] Based Alloys

Synthesis and Properties of Mg[subscript 2]EuH[subscript 5.5]

The Study of the Effect of Hydrogen on Physical-Mechanical Properties of Steel by Acoustic Microscopy Methods

Hydrogen as a New Alloying Element in Metals

Deuterium Generation Dynamics From Titanium Foils in an Electric Pulsed Hydride Injector

Combustion Processes in the Zr-Co-H[subscript 2] System and Synthesis of Hydrides of Intermetallic Compounds

Computer Simulation of P-C-T Diagrams of Systems "Hydride-Forming Material-Hydrogen" for Technical Applications

Metal-Hydride Systems for Hydrogen Isotopes Processing in Physical-Technical Installations

An Investigation of the Mechanism of Pressure Autostabilization in the Discharges with Metal-Hydride Cathode

Helium-3 Impact on the Equilibrium Pressures of La-Ni-Al Tritides

Metal Hydrides at High Pressure

Equilibrium Pressure of Protium and Deuterium Over Vanadium Dihydride Phase

Methods of Protecting Friction Unit Parts of Machines and Equipment used in Microbiological and Pharmaceutical Industries from Hydrogen Wearing

Preparation and Properties of Ultradispersed Hydrogen-Sorbing Metals and Intermetallic Compounds

Hydrogen Sorbents Based on Fullerenes

Energy and a New Vision

Oxygen Modification of Zr(Ti)-V-Ni Alloys: Phase Composition and Hydrogenation Properties
