Preface

Plenary Lectures

Analysis of slow motion by multidimensional NMR p. 3
Quantifying structural and dynamic disorder in ionically conducting solid solutions p. 15

\(^{14}\text{N} \text{MAS NMR spectroscopy. An instrumental challenge and informatory technique}\) p. 43

NMR diffusion studies of molecules in nanoporous materials p. 57
NMR studies of the mesomorphism, structure and dynamics of some new pyramidal liquid crystals p. 71

Investigation of conformational changes of organic molecules sorbed in zeolites by HR MAS NMR spectroscopy p. 83

"Lighting up" NMR and MRI in colloidal and interfacial systems p. 97

Progress in high resolution solid state NMR of quadrupolar nuclei: applications to porous materials and catalysts p. 107

Applications of hyperpolarized \(^{129}\text{Xe} \text{NMR spectroscopy to the study of materials}\) p. 115

NMR in colloid science with special emphasis on self-aggregating systems p. 123

Solid state NMR characterization of polymers and surfactant molecules as confined to porous silica materials p. 139

Characterisation of porous materials by NMR p. 155

Keynotes and oral presentations

Investigation of radical pairs in micelles using spin polarization techniques p. 173
Monitoring ultraslow motions in organised liquids p. 185
Characterization of mass transport and related phenomena in porous catalysts and sorbents by NMR imaging and displacement NMR spectroscopy p. 197

NMR spectroscopy contribution to the study of biomaterial mineralisation p. 209

Multinuclear magnetic resonance characterization of solid catalysts and their reactions in the adsorbed state p. 219

Orbital order and orbital fluctuations in colossal magnetoresistive manganites. An investigation with \(^{55}\text{Mn}\) and \(^{139}\text{La NMR}\) p. 231

The features of PFG NMR technique and some methodical aspects of its application p. 245

\(^{129}\text{Xe} \text{NMR of adsorbed xenon used as a probe to study microporous solid}\) p. 255

The mechanism for ionic and water transport in nafion membranes from resonance data p. 267

An aggregation number-based definition of the ionization of a micelle p. 277
Use of \(^{1}\text{H} \text{NMR imaging to study competitive adsorption of hydrocarbons in zeolites}\) p. 285

EPR study of photo-induced surface modifications of nanocrystalline TiO\(_2\) samples p. 297

Double resonance NMR study of mesoscopic interaction between surfactant and silica-alumina during the direct synthesis of A1SBA-15 mesoporous solids p. 307

MR profiling of drying in alkyd emulsions: origins of skin formation p. 317

Catching a falling drop by NMR: correlation of position and velocity p. 327

Robust characterisation of flowing emulsions using regularisation and velocity-compensating pulsed field gradient (PFG) techniques p. 337
Phospholipids’ sera and mononuclear cells in acute leukemia, malignant lymphoma and multiple myeloma—evaluation by \(^{31}\)P MRS in vitro

Vanadium-51 3QMAS NMR and its application for the studies of vanadia based catalysts

Simultaneous EPR and TPR study of the V-Ce-O catalysts redox properties

Static and dynamic NMR studies on cosmetic emulsions

Water magnetic relaxation in superparamagnetic colloid suspensions: the effect of agglomeration

A stray field imaging study of the drying process of precasting materials used in a steel making converter

The adsorption of polyelectrolytes to colloidal particles monitored by \(^1\)H relaxation of the solvent

1-D and 2-D double heteronuclear magnetic resonance study of the local structure of type B carbonate fluoroapatite

Spatio-temporal correlations in gravity-driven and pressure-driven fluid transport processes

Pulse gradient spin echo measurement of flow dynamics in a porous structure: NMR spectral analysis of motional correlations

Mesoporous transition metal aluminosilicas: incorporation of alkylphenothiazines and their photoionization

\(^{99}\)Tc NMR of technetium and technetium-ruthenium metal nanoparticles

Size effects on the nuclear magnetic resonance of sodium metal confined in controlled pore glasses

Poster Presentations

EPR investigation at 4K of ceria and Cu-Ce oxide under SO\(_2\) and H\(_2\) atmosphere

Characterization of mesoporous materials by \(^1\)H NMR

\(^{29}\)Si and \(^{27}\)Al MAS NMR study of alkali leached kaolinite and metakaolinite

Electron accepting properties of ZrO\(_2\) based catalysts studied by EPR of paramagnetic complexes of probe molecules

Characterization of organic nanoparticles synthesized in microemulsions by \(^1\)H NMR

Study of the anomalous solubility behaviour of solutions saturated with fullerenes by \(^{13}\)C-NMR

EPR study of polyamine copper complexes

Anisotropy of transverse \(^1\)H magnetization relaxation in strained elastomers by the NMR-MOUSE

Synergy phenomenon in bulk ruthenium-vanadium sulfides: \(^{51}\)V NMR and ESR studies

Correlation of \(^{51}\)V NMR parameters with local environment of vanadium sites

Solid-state NMR studies of mesostructured alumino-phosphates: structure and dynamics of the inorganic network and of the organic component

Dispersion in porous bead packs studied by velocity exchange spectroscopy

Alumina and zeolites as catalysts for decomposition and transformation of chlorofluorocarbons studied by multinuclear NMR methods
Solid state NMR studies and reactivity of silica-supported 12-tungstophosphoric acid  p. 565
Molecular motion in crosslinked polymers as studied by stimulated spin echo  p. 571
Structural changes in ZrO[subscript 2] catalyst doped with Fe and Cu. EPR study  p. 577
1H-NMR-investigation of the phase transition of thermo-reversible polymers in solution and at interfaces  p. 585
The dilute to semi-dilute transition in petroleum colloids, as studied by  [superscript 1]H NMR relaxometry and viscosimetry  p. 591
[superscript 51]V MAS NMR studies of inorganic vanadates with very small and large chemical shift anisotropies  p. 597
The EPR and electronic spectroscopy study of polyarylene-sulfophthalides and polydiphenylenephthalide reduction by alkali metals  p. 609
[superscript 195]Pt NMR-Fourier spectroscopy in the analysis of the mechanism of the cytostatic activity of platinum complexes  p. 615
Nitroxyl radicals as spin probes for the study of Lewis and Bronsted acid sites of oxide catalysts  p. 625
Porous structure of cellulose fiber walls studied with NMR diffusometry  p. 631
Alternation in the structure of water-in-oil microemulsions by the action of poly(ethylene glycol)  p. 637
In search of the nature of the anisotropic diffusion in nervous tissue--MR microscopy of the excised rat spinal cord  p. 643
Structural factors in micellar catalysis: NMR self-diffusion study  p. 649
Index  p. 655
Table of Contents provided by Blackwell's Book Services and R.R. Bowker. Used with permission.
