Preface

Prologue

Chronological Development of Quantum Mechanics: A Very Brief Account

Physical Constants

Mathematical Preliminaries

The Dirac Delta Function

Fourier Transforms

Basic Quantum Mechanics

Particles and Waves and the Uncertainty Principle

Time Dependent Schrodinger Equation

Propagation of Wave Packets and Concept of Group Velocity

Bound State Solutions of the Schrodinger Equation

Linear Harmonic Oscillator: I. Solution of the Schrodinger Equation and Relationship with the Classical Oscillator

One-Dimensional Barrier Transmission Problems

Angular Momentum I - The Spherical Harmonics

Spherically Symmetric Potentials Hydrogen Atom Problem

Rotation Vibration Spectra

Three-Dimensional Oscillator

Dirac's Bra and Ket Algebra

Linear Harmonic Oscillator: II. Solutions Using Bra and Ket Algebra

Angular Momentum II Using Bra and Ket Algebra

Experiments with Spin Half Particles

The Stern-Gerlach Experiment

Larmor Precession and Magnetic Resonance

Angular Momentum III Eigenfunctions Using Operator Algebra

The Double Well Potential and the Kronig-Penney Model

The JWKB Approximation

Addition of Angular Momenta: The Clebsch-Gordan Coefficients

Time Independent Perturbation Theory

Effects of Magnetic Field

The Variational Method

The Helium Atom and the Exclusion Principle

Some Select Topics

Elementary Theory of Scattering

Time Dependent Perturbation Theory

The Semi-Classical Theory of Radiation and the Einstein Coefficients

The Quantum Theory of Radiation and Its Interaction with Matter

Relativistic Theory

Appendices
