Contributing Authors
Welcome Address by the Federal Minister of Defence
Foreword
Introduction
Chemical weapons convention after the first review conference
Implementation of Russia's obligations to destroy chemical weapon in Udmurtia Republic
The CWC after the review conference
Ecological Risks Associated with the Destruction of Chemical Weapons
Prediction
Evaluation of state of environment and monitoring of hazardous facilities
Prediction of quantitative assessments of effects on nature from potential accidents at chemical warfare agent facilities
Ecological risks of toxic substances combustion
Risk assessment of chemical weapons influence on ecosystems as the whole
Health and environmental risks associated with the destruction of chemical weapons
Ecological risks analysis for the chemical weapons destruction facility
An approach to assessment of chemical risk on the basis of generation of time series
The complex approach in appraisal of the conditions of natural ecosystems in the zone

Used for the storage of chemical weapons (Pochep, Bryansk region)
Analysis of ecological risks within an environmental monitoring system
Dechlorination of recalcitrant polychlorinated contaminants using ball milling
Ecological risk assessment for as-containing chemical warfare agents - status and perspectives

Personal monitoring of old chemical weapons dismantling operations at Poelkapelle (Belgium)
Radio-ecological monitoring of the environment
Ion mobility spectrometry for monitoring the destruction of chemical warfare agents

Identification of chemical neutralization of products of organophosphorus chemical warfare agents
Environmental and health monitoring in relation to the demolition of the former CWPF at JSC Khimprom Novocheboksarsk, Russia
Vapor validation of monitoring systems for detection of trace levels of chemical warfare agents in air
Tacis project, "the development of an environmental and health monitoring system related to the demilitarization of the chemical weapons facility at the detached plant nr. 4 of OAO Khimprom, Novocheboksarsk" and possible implications for future Russian demilitarization activities at CWPFs
Toxicological and public health aspects of two-stage technology of chemical warfare agents destruction in Russia
Chemical and biological-ecological aspects of risk assessment for lewisite destruction
About evaluation practice of emergency environmental risks of chemically dangerous facilities

Risk assessment and safety management at chemical facilities with the use of new information technologies

On the analysis of environmental risks associated with the possible leakage of chemical warfare agents during transportation and disposal of munitions

Ecological risks and ecological insurance in Russia (in connection with the problem of chemical weapon destruction)

Insurance of risk of impurity of environment during destruction of chemical weapon

Prevention

About some risk assessment problems associated with hazardous facilities exploitation
