ProGenGrid: A Grid Framework for Bioinformatics

A preliminary investigation on connecting genotype to oral cancer development through XCS, 2

Mass Spectrometry Data Analysis for Early Detection of Inherited Breast Cancer

Feature Selection combined with random subspace ensemble for gene expression based diagnosis of malignancies

Pruning the Nodule Candidate Set in Postero Anterior Chest Radiographs

Protein Structure Assembly from Knowledge of beta-sheet Motifs and Secondary Structure

Analysis of Oligonucleotide Microarray Images using a fuzzy sets Approach in HLA Typing

Combinatorial and Machine Learning Approaches in Clustering Microarray Data

Gene expression data modelling and validation of gene selection methods

Mining Yeast Gene Microarray Data with Latent Variable Models

Recent Applications of Neural Networks in Bioinformatics

An Algorithm for Reducing the Number of Support Vectors

Pre-WIRN workshop on Computational Intelligence on Hardware: Algorithms, Implementations and Applications

Genetic Design of linear block error-correcting codes

Neural hardware based on kernel methods for industrial and scientific applications

Statistical Learning for Parton Identification

Time-Varying Signals Classification Using a Liquid State Machine

FPGA Based Statistical Data Mining Processor

Neural Classification of HEP Experimental Data

WIRN Regular Sessions- Architectures and Algorithms

Models

Applications
