Prandtl's boundary layer concept and the work in Gottingen  p. 1
The full lifespan of the boundary-layer and mixing-length concepts  p. 19
Rational basis of the interactive boundary layer theory  p. 29
Symmetry methods in turbulent boundary layer theory  p. 39
Viscous/inviscid interaction procedures for compressible aerodynamic flow simulations  p. 49
The application of optimal control to boundary layer flow  p. 59
Leading-edge boundary layer flow (Prandtl's vision, current developments and future perspectives)  p. 73
Application of transient growth theory to bypass transition  p. 83
Routes of boundary-layer transition  p. 95
Instabilities in boundary-layer flows and their role in engineering  p. 105
In-flight investigations of Tollmien-Schlichting waves  p. 115
The influence of roughness on boundary layer stability  p. 125
Boundary-layer instability in transonic range of velocities, with emphasis on upstream advancing wave packets  p. 135
Laminar-turbulent-laminar transition cycles  p. 145
A century of active control of boundary layer separation : a personal view  p. 155
Boundary layer separation control by manipulation of shear layer reattachment  p. 167
Stability, transition, and control of three-dimensional boundary layers on swept wings  p. 177
Transition to turbulence in 3-D boundary layers on a rotating disk (triad resonance)  p. 189
Control and identification of turbulent boundary layer separation  p. 199
The near-wall structures of the turbulent boundary layer  p. 209
Turbulence in supersonic and hypersonic boundary layers  p. 221
The role of skin-friction measurements in boundary layers with variable pressure gradients  p. 231
The mean velocity distribution near the peak of the Reynolds shear stress, extending also to the buffer region  p. 241
Turbulence modelling for boundary-layer calculations  p. 247
Instability and transition in boundary layers : direct numerical simulations  p. 257
Wall modeling for large-eddy simulation of turbulent boundary layers  p. 269
Revisiting the turbulent scale equation  p. 279
Industrial and biomedical applications  p. 291
Analysis and control of boundary layers : a linear system perspective  p. 301
The development (and suppression) of very short-scale instabilities in mixed forced-free convection boundary layers  p. 313
Computational studies of boundary-layer disturbance development  p. 325
Hypersonic real-gas effects on transition  p. 335
Stabilization of hypersonic boundary layer by microstructural porous coating  p. 345
The asymptotic structure of high-Reynolds number boundary layers  p. 355
Instabilities near the attachment-line of a swept wing in compressible flow  p. 363
Structure formation in marginally separated aerodynamic and related boundary layer flows

High Reynolds number turbulent boundary layers subjected to various pressure-gradient conditions

Analysis of adverse pressure gradient thermal turbulent boundary layers and consequence on turbulence modeling

The significance of turbulent eddies for the mixing in boundary layers

Unstable periodic motion in plane couette system: the skeleton of turbulence

Some classic thermal boundary layer concepts reconsidered (and their relation to compressible couette flow)

Vorticity in flow fields (in relation to Prandtl's work and subsequent developments)

An experimental investigation of the brinkman layer thickness at a fluid-porous interface

Experimental investigations of separating boundary-layer flow from circular cylinder at Reynolds numbers from $10^5$ up to $10^7$ (three-dimensional vortex flow of a circular cylinder)

Scale-separation in boundary layer theory and statistical theory of turbulence

On boundary layer control in two-dimensional transonic wind tunnel testing

Theory of boundary layer instability: particle or wave?
