Theory and computation in the study of molecular structure p. 3
Coupled-cluster and configuration-interaction approaches to quasidegeneracy p. 13
Noniterative coupled-cluster methods for excited electronic states p. 45
Excited state self-consistent field theory using even-tempered primitive Gaussian basis sets p. 107
Practicable factorized TDLDA for arbitrary density- and current-dependent functionals p. 127
Inequalities relating the elements of the second-order reduced density matrix p. 151
Strutinsky's shell-correction method in the extended Kohn-Sham scheme: application to the ionization potential, electron affinity, electronegativity and chemical hardness of atoms p. 159
Generalized diabatic study of ethylene "isomerism" p. 177
Progress with BERTHA: a relativistic atomic and molecular structure package p. 199
Non-standard representations of the Dirac equation and the variational method p. 217
Generalized RECP accounting for Breit effects: uranium, plutonium and superheavy elements 112, 113, 114 p. 229
P, T-parity violation effects in polar heavy-atom molecules p. 253
QED calculation of heavy multicharged ions with account for correlation, radiative and nuclear effects p. 285
Quantum calculation of cooperative muon-nuclear processes: discharge of metastable nuclei during negative muon capture p. 301
Study of interaction abilities using an energy partitioning scheme in some water clusters p. 337
Ab initio van der Waals potential energy surfaces: application to complexes of bromine molecule with helium atoms p. 347
One-electron pseudo-potential investigation of Na(3p[superscript 2]P)Ar[subscript n] clusters: electronically excited isomers and emission spectra p. 371
Understanding chemical reactions involving non-adiabatic transitions: predissociation of the electronically excited Li-HF complex p. 385
Density functional studies of noble metal clusters: adsorption of O[subscript 2] and CO on gold and silver clusters p. 407
Three-gold cluster as proton acceptor in nonconventional hydrogen bonds O-H...Au and N-H...Au p. 433
Molecular modelling of metal complexes with open D-shell p. 451
Ab-initio Gutzwiller method: first application to plutonium p. 509
Ab-initio quantum diffusion in quasicrystals p. 535
Towards nanostructured materials: an example of boron nanotubes p. 547
Stochastic optimization methods for protein folding p. 557
