Preface

Hybrid adsorptive materials and Special Inorganic Adsorbents and special inorganic adsorbents
Synthesis, Structure and Adsorption Properties of Functionalized Polysiloxane Materials
Design, Synthesis and Characterization of Ordered Mesoporous Materials for Environmental Applications
Selective Removal of Radionuclides from Nuclear Waste Effluents using Inorganic Ion Exchangers
Experimental Approach to the Synthesis of Hybrid Adsorbents on the basis of Polysiloxane Xerogels Functionalized with Calix[4]arenes and their Derivatives

Hybrid Polymer-Silica Adsorbent for Chromatography
Design and Characterization of Novel Zeoadsorption Media derived from Surface Coating with Functional Hydrocarbons
Regulation of Lignocellulose Materials Sorption Properties by Modification for Environmental Application
Hydrothermostability of Mesoporous Mesophasse Materials of MCM-41 and SBA-3 type
Uranium Sorption by Organozeolites and Ferromagnetic Organozeolites from Waste Water of Special Laundry
Template Effect of the M3+ -Cations in the Course of the Synthesis of High Dispersed Titanium and Zirconium Phosphates
New Spherically Granulated Inorganic Ion Exchangers on the basis of Titanium Phosphate
Iron-based Nanoadсорbents for the Removal of Metal Ions from Water
Preliminary Study on the Adsorption of the Cationic Dye Astrazon Red by a Portuguese Bentonite
Activated Carbon, Combined Adsorbents and other organic Adsorbents
Morphology and Surface Chemistry of Chemically Treated Activated Carbons
Porous Carbons in Gas Separation and Storage
Carbonaceous Materials as Desulfurization Media
Combined Adsorption Preparations from Active Carbons, Clay Minerals and Natural Plant Products
Synthesis of New Low Density Carbon Materials with Molecular Sieving Properties
Granular Activated Carbon from Deciduous Wood Lignocellulose
Synthesis of Activated Carbon from Spent Lubricating Oil and Application for Adsorption of Cadmium and Lead Ions from Aqueous Solution
Synthesis and Catalytic Properties of N-Containing Synthetic Carbons on a basis of Copolymer of Styrene and Divinylbenzene
Adsorption Properties of Modified Filtration Materials in Water Treatment
Properties of Combined Sorbent “Zeolite in Fiber”
Enhancement of Adsorption Capacity by use of Phase Change Material (PCM) as Additive in an Activated Carbon (AC) Fixed Bed Adsorber
Thermochemical Activation of Lignins for Obtaining Effective Sorbents
Use of Active Carbon to Phenol Reduction from Water Solution
Removal of Hydrogen Sulfide, Ammonia and Nitrite Ions from Water Solutions using Modified Active Carbons
Adsorption of Chromium Ions from Aqueous Solution using Activated Carbon-Aluminosilicate Material
Modified Natural Sorbents for Binding Heavy Metal Ions
Influence of Adsorption of Viruses of Plants on Electric Properties of Porous Silicon

Adsorption Study of Lead by Ascophyllum Nodosum using a Factorial Experimental Design
Application of Chitin Containing Sorbents for Treatment of Water Solutions
Biosorption Performance of a Binary Metal Mixture by Algal Biomass: Column Experiments
Removal of Selenium
