Nineteen years of x-ray laser research before the first international XRL conference in 1986

Overview of tabletop x-ray laser development at the Lawrence Livermore National Laboratory p. 1

Recent progress in x-ray laser development and applications at LIXAM p. 13

A high repetition-rate, petawatt class Ti : sapphire laser dedicated to X-UV generation at LASERIX p. 23

Recent advances of the x-ray laser research at APRC p. 29

X-ray lasing using the GRIP scheme p. 37

Development of 0.1-Hz repetition driver laser for the TCE x-ray lasers p. 45

Modulation of plasma density to achieve highly efficient x-ray lasers with good beam quality p. 51

Origin of microstructures in picosecond x-ray laser beams p. 61

Focusing system for a non-normal incidence pumped, sub-10 nm TCE XRL p. 69

X-ray imaging of the heating zone of non-normal incidence pumped XRL plasma p. 75

Formation of an elongated plasma column from a gas puff target irradiated with a laser beam focused using an axicon p. 81

Observation of density dip in a pre-formed plasma : toward axial pumping x-ray laser p. 87

Experimental studies on transient Ni-like Ag x-ray laser pumped with the picosecond pulsed laser facility at NLHPLP p. 93

X-ray laser source using ceramic target p. 99

The generation of x-ray laser radiation on SOKOL-P laser facility p. 107

Electron temperature measurements of model Ne-like x-ray laser plasmas from resonance keV spectra p. 113

Development of plasma x-ray amplifiers based on solid targets for the injector-amplifier scheme p. 121

X-ray laser beam shape control : high-res VIS and keV imaging of the amplifying plasma p. 131

Spatial and temporal profiles of the 21.2-nm saturated x-ray laser output p. 139

Advances in high repetition rate soft x-ray lasers : lasing down to 10.9 nm and high brightness operation of a seeded soft x-ray amplifier using a solid target p. 149

On the way towards a high repetition rate x-ray laser p. 161

A 10 Hz, 3 microjoule transient soft x-ray laser pumped in grazing incidence p. 173

Generation of Ni-like Ag x-ray laser and high-order harmonics forward harmonic seeded x-ray laser p. 183

LASERIX : a multi x-ray / XUV beamline high repetition-rate facility p. 191

Seeding high order harmonic in a transient x-ray laser amplifier p. 201

Feasibility of 3.4 nm laser pumped by ultraintense RBS laser p. 209

Status and prospects on soft x-ray lasers seeded by a high harmonic beam at LOA p. 225

Generation of efficient optical-field-ionization x-ray lasers in cluster jets p. 235

Experimental investigation of the parameter space of optical-field-ionization collisional-excitation x-ray lasers in a cluster jet p. 245

Collisionally pumped x-ray lasers for shorter wavelengths p. 251

Inner shell lasing in titanium via electron collisional ionization p. 263
Gain generation in the critical density region of a TCE XRL

2-D hydrodynamic simulation of laser plasma generation for transiently pumped soft x-ray amplifier

2D hydrodynamic simulation of focus-line plasma in Ni-like Ag x-ray laser research

Theoretical research on Ni-like Ag 13.9nm x-ray laser driven by 3[mu]m and 6[mu]m wavelength laser

Theoretical research on Ni-like Ag x-ray laser by grazing incidence pumping

Theoretical research on enhancement of gain for Ni-like Ag 13.9nm x-ray laser using a new two-layer target

Modelling of an inner-shell photo-ionization x-ray laser using a recently demonstrated betatron source

Similarity model of longitudinally pumped x-ray laser

Numerical analysis of plasma medium of a fully coherent x-ray laser

Longitudinally pumped Ne-like titanium x-ray laser simulation with a post-processor code coupled to EHYBRID

Simulation of longitudinally pumped Ni-like molybdenum x-ray laser medium using post-processor code coupled to EHYBRID

X-ray laser at 10-15 nm in Pd-like ions er XXIII - re XXX

Temporal characterization of attosecond harmonic pulses

Nonlinear interaction of intense attosecond XUV pulses with atoms and molecules

Anomalous enhancement of single high-order harmonic generation at 61 nm and 47 nm by indium and tin due to strong resonance

Enhanced high harmonic generation from ions using a capillary discharge plasma

Generation of high-order harmonic continuum supporting single attosecond pulse in argon driven by intense 7 fs laser pulse

High-order harmonic generation from laser-ablated plasma plume pumped by femtosecond laser pulse

Development of multilayer optics for the EUV, soft x-ray and x-ray regions in IPOE

Chirped multilayer soft x-ray mirrors for attosecond soft x-ray pulses

Nano-scale imaging with tabletop soft x-ray lasers : sub-38 nm resolution

A non-normal incidence pumped Ni-like Zr XRL for spectroscopy of Li-like heavy ions at GSI/FAIR

Recent progress of x-ray laser at Shenguang II : diagnosing ICF plasma by Ni-like Ag 13.9 nm x-ray laser

Plasma opacity and laser ablation measurements using x-ray lasers

Applications of focused x-ray laser at 21 nm in high-energy density experiments

Mass spectroscopy of neutral metal oxide clusters using a desk-top soft x-ray laser

Soft x-ray laser interferometry of colliding al plasmas in a semi-cylindrical cavity

Single photon ionization mass spectroscopy of hydrogen bonded and van der Waals cluster systems using a capillary discharge soft x-ray laser

Soft x-ray laser holographic imaging with sub-micron resolution

Table top nanopatterning using soft x-ray lasers

Soft x-ray laser ablation of nanometer-scale features
Ablation of organic molecular solids by focused soft x-ray free-electron laser radiation

Inner-shell ionization in Xe clusters irradiated with x-ray laser pulse

VUV and soft x-ray spectroscopy using a toroidal grating spectrograph

Development and application of a compact broadband laser-plasma EUV source

Generation of the submicron soft x-ray beam using a fresnel zone plate

Hydrodynamic simulations and soft x-ray laser interferometric studies of energy transport in tightly focused laser-heated aluminum plasmas

Combination of surface characterization techniques for analyzing the roughness of the substrate

Fabrication of multilayer reflective mirrors for soft x-ray laser working at the wavelength of 4.48 nm

Imaging research with non-periodic multilayers for inertial confinement fusion diagnostic experiments

Analysis of 46.9-nm pulsed laser radiation aftereffects in Sc/Si multilayer x-ray mirrors

X-ray laser interference microscopy for advanced studies of laser-induced damages

X-ray laser Thomson scattering at 21 nm of laser-heated high-density foil plasmas

One year of user operation of FLASH, the free-electron laser in Hamburg

Intense femto-second laser-driven x-ray source coupled with multiple directional quantum beams for applications

Radiative properties and hydrodynamics of laser-produced tin plasma for efficient extreme-ultraviolet light source

Laser physics research relevant to laser-electron x-ray generator

Laser electron generator of the x-ray radiation

Time-resolved keV emission spectra from hot, dense buried layer k-shell and l-shell targets

Novel attempts to realize an innershell x-ray laser in Na

310 angstroms x-ray lasing under beta-decay of tritium

Capillary discharge soft x-ray laser at the University of L'Aquila : laboratory survey

Compact EUV lasers based on low-inductive capillary discharges

Experimental comparison of capillary pinching discharge in argon and nitrogen

Analysis of laser pumping by capillary pinching discharge in argon and nitrogen

CAPEX-U - a new driver for discharge-pumped lasers working on the wavelength below 15 nm

Towards nitrogen recombination soft x-ray laser scheme in a capillary discharge Z-pinch

On the influence of preionization current directions on x-ray lasing in capillary discharge
