Contributor contact details
Woodhead Publishing in Textiles
Preface
Surface modification and preparation techniques for textile materials
Introduction
Natural fibres
Synthetic fibres
Surface preparation techniques for textile materials
Surface modification techniques for textile materials
Recent studies on the modification of textiles
Future trends
References
Textile surface characterization methods
Introduction
Surface characterization by advanced microscopies
Surface characterization by advanced spectrometers
Surface wetting and contact angles
Future trends
References
Textile surface functionalization by physical vapor deposition (PVD)
Introduction
Working principles of physical vapor deposition
Functionalization of textiles by sputtering
Interfacial bonding
Future trends
References
Surface grafting of textiles
Introduction
Techniques of surface grafting
Properties achieved and applications
Strengths and weaknesses of surface grafting
Future trends
Sources of further information and advice
References
Modification of textile surfaces using electroless deposition
Introduction
The techniques and key principles of electroless deposition
Characterisation of electroless copper- and nickel-plated polyester fabrics
Strengths and weaknesses of electroless deposition
Future trends
Sources of further information and advice
References

Textile surface functionalisation by chemical vapour deposition (CVD) p. 126

Introduction p. 126

Practical methods for chemical vapour deposition p. 129

Characteristics of chemical vapour deposition coatings p. 132

Applications p. 133

Current trends and potential advances in uses and techniques p. 136

Further sources of information p. 137

References p. 137

Enzyme surface modification of textiles p. 139

Introduction: principles of enzyme surface modification of textile materials p. 139

Enzymes, technologies and materials (natural materials, synthetic materials, biomaterials) p. 142

Strengths and weaknesses of enzyme surface modification p. 155

Future trends p. 156

Acknowledgements p. 157

References p. 158

Modification of textile surfaces using nanoparticles p. 164

Introduction p. 164

Nanoparticles synthesis and characterization p. 165

Functional properties using nanoparticles p. 169

Commercialization of nanofinishing in textiles p. 180

Strengths and weaknesses of nanotechnology for surface modification p. 182

Future trends p. 182

References p. 182

Modification of textile surfaces using the sol-gel technique p. 185

Introduction: the principles of the sol-gel technique p. 185

General aspects of textile finishing using (nano-)sols p. 190

Sol-gel-based finishing effects p. 197

Future trends p. 209

References p. 210

Nano-modification of textile surfaces using layer-by-layer deposition methods p. 214

Introduction p. 214

The LbL deposition technique p. 218

LbL deposition on textile surfaces p. 221

Conclusions and future trends p. 232

Acknowledgements p. 233

References p. 233

Surface modification of textiles for composite and filtration applications p. 238

Introduction p. 238

Surface modification of textiles for composites p. 239

Surface properties of reinforcing fibers and applications p. 246
