

Introduction about the author  
Acknowledgements  
A Hellish beginning  
The Hadean  
The start of something Really Big 14 billion years ago  
From dust to a planet  
The earliest continents: a watery birth  
The birth of the Archean: a unique Canadian record  
Early life on Earth  
Moving Earth: Plate Tectonics  
Looking deep into planet Earth  
Crust, mantle and core  
The Earth stirs and our crust moves  
The formation and destruction of lithospheric plates  
Where plates move away from each other: making oceanic crust  
Where plates collide: the subduction factory  
Where plates slide past each other: transform boundaries  
Plate collisions and the building of continents  
Volcanic activity and plate tectonics  
Volcanoes at the edges of plates  
Volcanoes in the middle of plates: hot spots  
Under heat and pressure: metamorphic rocks  
Plate tectonics: is it the only model of how Earth works?  
LIPS and MOMO events  
MOMO events and the history of life  
Dynamic topography  
Rock stars: the impact of meteorites  
Paleomagnetism and moving plates  
The rock cycle and sedimentary basins  
A final comment on plate tectonics  
The United Plates of Canada: Four Billion Years of Tectonic Activity  
Construction and breakup: how continents evolve  
The earliest continents  
From Arctica to Nena to Rodinia  
The beginning of the Paleozoic: the explosion of Rodinia  
The assembly of Pangea  
The breakup of Pangea and the westward drift of North America  
The last few million years  
Canada's Heartland: The Shield  
A crustal collage built by plate tectonics  
Provinces and cratons

The North American craton vs. the Canadian Shield

History of the North American craton: a tale of four continents (Arctica, Nena, Columbia and Rodinia)

The first North American continent (c. 2.7 Ga): Arctica

Formation of the Slave Province

Formation of the Superior Province; the largest piece of the craton

The Slave and Superior provinces weld together

Glaciation in the Huronian

The younger North American continents (c. 2.0 to 1.5 Ga): Nena and Columbia

The Trans-Hudson, Thelon, Wopmay and Penokean orogenies

The Trans-Hudson Orogeny in eastern Canada

The Sudbury structure: A gigantic meteorite strike

Nena on the rack: The Midcontinent Rift

The third North American continent (c. 1.7 to 1 Ga): part of Rodinia

The Grenville Province in central Canada

The Grenville Province in eastern Canada

Granites and moon rocks of the Grenville Orogen

The end of Rodinia (1 Ga to 600 Ma): Laurentia breaks free

Disappearing mountains and the formation of the Canadian Shield

Early life in Canada

Eozoon canadense

Prokaryotes: the earliest bacteria

The Eukaryotes: building blocks of animals and plants

Life diversifies: the Cambrian explosion

Giant Seas Cover The Shield: The Interior Platform
