Preface

Materials Research Society Symposium Proceedings

Spatially Resolved Local Atomic Structure from Exelfs p. 3
Cross-Sectional Scanning Tunneling Microscopy of III-V Semiconductor Structures p. 15
Challenges and Opportunities in Magnetic Resonance Force Microscopy p. 25
Trends in Atomic Resolution Electron Microscopy p. 43
Flux Line Dynamics with Electron Holography p. 55
Analysis of Interface Dynamics in Solid-State Phase Transformations by In Situ p. 65
Hot-Stage High-Resolution Transmission Electron Microscopy
Epitaxial Growth of Two-Dimensional Dichalcogenides and Modification of Their Surfaces with Scanning Probe Microscopes p. 79
Microstructural Imaging of Localized Chemical Reactions Using Valence Photoelectrons p. 87
Microtribological Studies by Using Atomic Force and Friction Force Microscopy and Its Applications p. 93
Molecular Dynamics Simulation of the Elastic Deformation of Nanometer Diameter Metal Clusters p. 99
A Thermal Stage for Nanoscale Structure Studies with the Scanning Force Microscope p. 105

Dynamic Behaviour of Lead Nanoparticles in a Dielectric Matrix p. 109
In-Situ Dynamic High-Resolution Transmission Electron Microscopy Investigation of Guest-Layer Behavior During Deintercalation of Mercury Titanium Disulfide p. 115

In-Situ Observation of Oxide Monolayer Formation on Copper Solid-Liquid Interfaces p. 121
Application of High Spatial Resolution Electron Diffraction Techniques to the Study of Local Properties of Crystalline Solids p. 129
Holographic Atom Imaging from Experimental Photoelectron Angular Distribution Patterns p. 141
A CBED Procedure for Determining Local Residual Stresses from Nanoscale Areas in Cermets p. 151
Electronic Structure and Bonding at Interfaces Between CVD Diamond and Silicon p. 163
High Resolution TEM Applied to Nanoscale Structure Studies p. 177
Moire Patterns in High Resolution Electron Microscopy Images p. 183
Nanostructures Detected by Conductivity Spectroscopy p. 189
Synthesis and Characterization of Structured Metal/Silica Clusters p. 195
Porous Silicon Luminescence Study by Imaging Methods: Relationship to Pore Dimensions p. 201
TEM Studies on the Morphology, Size Distribution and Structure of Nanocrystalline Iron Particles Using a Formvar Embedded Preparation Technique p. 207
Composition and Strain Analysis of Semiconductor Heterostructures Using Thickness Fringes on TEM Images p. 213
Electron Holography of Flux Lattices in Niobium p. 219
Nanoindentation on Contamination-Free Gold Films Using the Atomic Force Microscope p. 225
Observation and Measurement of Atomic Scale Imperfections in Materials Using CBED + EBI/H

Imaging of Buried Si and Si:Ge Surface Structure Under Amorphous Ge Films by Plan View Transmission Electron Microscopy

Structural Investigation of NaNO$_3$ Nanophase Confined in Porous Silica

Interfacial Roughness in GaAs/AlGaAs Multilayers: Influence of Controlled Impurity Addition

Direct Observation of Diffraction Arcs from Nanoscale Precipitates in Steels by Highly Brilliant and Focused Synchrotron Radiation Beam and Imaging Plate

Nanostructural Studies by Mössbauer Spectroscopy

NMR Studies of Electronic and Local Structure in Cu-Au Alloys

Atomic Resolution Electronic Structure Using Spatially Resolved Electron Energy Loss Spectroscopy

Trace Analysis of Nanoscale Materials by Analytical Electron Microscopy

Selective Imaging of Metal Atoms in the Semiconducting Layered Compound MoS$_2$ by STM/STS

Atomic-Resolution Chemical Analysis at 100 kV in the Scanning Transmission Electron Microscope

Nanoanalytical Characterization of Granular Ag-Fe Films with Giant Magnetoresistance

AEM Investigation of Tetrahedrally Coordinated Ti$^{4+}$ in Nickel-Titanate Spinel

Quantitative X-ray Microanalysis for the Study of Nanometer-Scale Phases in the AEM

Determination of the Number of Molecules Bonded to a CdSe Nanocrystallite Surface

TEM Study of the Pt-Ru BI-Metallic Catalyst Formation

Raman Spectroscopy of Size Selected, Matrix Isolated Si Clusters

Elemental Mapping by Energy-Filtered Electron Microscopy

EELS Imaging of Biological Materials

Annular Dark Field Imaging in Stem

Quantitative HRTEM: Measuring Projected Potential, Surface Roughness and Chemical Composition

Compositions and Chemical Bonding in Ceramics by Quantitative Electron Energy-Loss Spectrometry

STM Studies at Electrochemically Controlled Interfaces

Low Voltage Point Projection Microscopy and Time of Flight STM - Two New Microscopies

Imaging Single Nacreous Tablets with the Atomic Force Microscope

Scanning Tunneling Microscopy (STM) and Scanning Force Microscopy (SFM) of Liquid Crystals and Polymers

Visualizing Langmuir-Blodgett Films with the Atomic Force Microscope

Polarization, Interference Contrast, and Photoluminescence Imaging in Near Field Optical Microscopy

Photon Tunneling Microscopy Applications
