Preface

Material Research Society Symposium Proceedings

Dynamics of Silicon Oxidation .......................... p. 3

Microscopic and Theoretical Investigations of the Si-SiO[subscript 2] Interface .......................... p. 15

Characterization of the P[subscript b1] Interface Defect in Thermal (100)Si/SiO[subscript 2] by Electron Spin Resonance: [superscript 29]Si Hyperfine Structure and Electrical Relevance

Detection of Interfaces States Correlated with Layer-by-Layer Oxidation on Si(100) .......................... p. 33

Defect States Due to Silicon Dangling Bonds at the Si(100)/SiO[subscript 2] Interface and the Passivation by Hydrogen Atoms .......................... p. 39

Surface and Interfacial Topography of Oxides on Si(111) With Ultra-Low Atomic Step Density

XPS Studies of the Si/SiO[subscript 2] Interface With Synchrotron Radiation .......................... p. 51

Precise Characterization of Ultrathin Nitride/Oxide Gate Dielectrics by Grazing X-ray Reflectance and Spectroscopic Ellipsometry

Highly Reliable Thin Hafnium Oxide Gate Dielectric .......................... p. 81

Band Alignments of High-K Dielectrics on Si and Pt .......................... p. 87

Roles of Primary Hot Hole and FN Electron Fluences in Gate Oxide Breakdown .......................... p. 99

A Study of Quasi-Breakdown Mechanism in Ultrathin Gate Oxide Under Various Types of Stress

Investigation of Quasi-Breakdown Mechanism in Ultrathin Gate Oxides .......................... p. 105

Correlation Between Gate Induced Drain Leakage and Plasma Induced Interface Traps .......................... p. 111

Effects of Reverse Biased Floating Voltage at Source and Drain During High-Field Electron Injection on the Performance of NMOSFETs .......................... p. 123

Ultrathin NO/N[subscript 2]O Oxynitride Dielectric For Advanced Flash Memory Application: Single Wafer and Batch Technology .......................... p. 141

Evaluation of the Degradation Dynamics of Thin Silicon Dioxide Films Using Model-Independent Procedures .......................... p. 147

Chemical and Structural Characterization of Ultrathin Dielectric Films Using AEM .......................... p. 153

Analysis of MOS Device Capacitance-Voltage Characteristics Based on the Self-Consistent Solution of the Schrodinger and Poisson Equations .......................... p. 159

Room Temperature Ultraviolet Photoluminescence from 800[degree]C Thermally Oxidized Si[subscript 1-x-y]Ge[subscript x]C[subscript y] Thin Films on Si(100) Substrate .......................... p. 165

An XPS Study of Silicon Oxynitride Rapid Thermally Grown in Nitric Oxide .......................... p. 171
Improved Performance and Reliability in Aggressively-Scaled NMOS and PMOS FETs: i) Monolayer Interface Nitridation, and ii) Replacement of Stacked Oxide/Nitride Dielectrics With Optimized Oxide/Oxynitride Stacks

Structure Analysis of CeO$_2$/ZrO$_2$/Si Multilayer Thin Films by HRTEM

Controlling the Concentration and Position of Nitrogen in Ultrathin Oxynitride Films Formed by Using Oxygen and Nitrogen Radicals

Correlation Between Development of Leakage Current and Hydrogen Ionization in Ultrathin Silicon Dioxide Layers

From Radiation Induced Leakage Current to Soft Breakdown in Irradiated MOS Devices With Ultrathin Gate Oxide

Low-Temperature Direct-Oxidation of Si Using Activated Oxygen Generated by Tungsten Catalytic Reaction

Process Improvements for Reductions in Total Charge and Interface Trap Densities of Thermally-Grown Sub-3.5nm-Thick Silicon Nitrides

Structural, Optical and Electrical Characteristics of Silicon Carbon Nitride

Atomic-Scale Structure of the Si-SiO$_2$ and SiC-SiO$_2$ Interfaces and the Origin of Their Contrasting Properties

Initial Oxynitridation of a Si(001)-2x1 Surface by NO

Low-Temperature Oxidation of Silicon(100) Substrates Using Atomic Oxygen

Modification of Si(001)/SiO$_2$[subscript 2] Interfaces by Nitric Oxide Treatments: An Electron Paramagnetic Resonance Study

Theoretical and Experimental Investigation of Ultrathin Oxynitrides

Paramagnetic Defects Related to Positive Charges in Silicon Oxynitride Films

Furnace Oxynitridation in Nitric Oxide of Thin Silicon Oxide: Atomic Transport Mechanisms and Interfacial Microstructure

Challenges in Interface Trap Characterization of Deep Sub-Micron MOS Devices Using Charge Pumping Techniques

Photoluminescence Characterization of Defects in Thermal Oxide

Impact of Temperature and Breakdown Statistics on Reliability Predictions for Ultrathin Oxides

Electrical and Physical Characterization of Ultrathin Silicon Oxynitride Gate Dielectric Films Formed by the Jet Vapor Deposition Technique

Independent Tunneling Reductions Relative to Homogeneous Oxide Dielectrics from i) Nitrided Interfaces, and ii) Physically-Thicker Stacked Oxide/Nitride and Oxide/Oxynitride Gate Dielectrics

The Boundary Between Hard- and Soft-Breakdown in Ultrathin Silicon Dioxide Films

A Study of Trap Profiles in Thin Silicon Dioxide Films at Dielectric Breakdown Using Percolation Model

Measurement Technique, Oxide Thickness and Area Dependence of Soft-Breakdown

Study of Stress-Induced Leakage Current in Thin Oxides Stressed by Corona Charging in Air: Relationship to GOI Defects

New Type of Superlattice: An Epitaxial Semiconductor-Atomic Superlattice, SAS

Quantum Confinement in Nanocrystalline Superlattices

Multi-Million Atom Molecular-Dynamics Simulations of Stresses in Si(111)/Si[subscript 3]N[subscript 4][subscript 4] Nanopixels

Memory Effects of Ion-Beam Synthesized Ge and Si Nanoclusters in Thin SiO$_2$[subscript 2]-Layers
Author Index p. 381
Subject Index p. 385
