Preface p. xvii
Acknowledgments p. xix
Materials Research Society Symposium Proceedings p. xxi
Perspectives Cooperative R&D on Semiconductor Technology in Japan p. 3
Performance Clock Tree and Power Grid Design 1 GHz p. 11
Characterization of Dual Damascene Cu-SiO$_2$ Interconnects in Time and Frequency Domains p. 19
Technology and Design Challenges for Low Power and High Performance Microprocessors p. 25
The Comparison of NMOS Devices With Al Interconnect and Cu Interconnect p. 35
Strategy of Future ULSI Metallization p. 41
Interconnection from Design Perspective p. 53
Chip-Level Performance Improvement Using Triple Damascene Wiring Design Concept for the Future CMOS Devices p. 59
Cu/Low-k Integration A Novel SiO$_2$-Air Gap Low-k for Copper Dual Damascene Interconnect p. 71
Integration Issues of Low-k Materials in Damascene Structure p. 77
Dual Damascene Integration of SiLK Semiconductor Dielectric p. 85
Dual Inlaid Copper and Fluorine-Doped TEOS BEOL Integration for a High-Performance 0.18 [mu]m Technology p. 91
Cu Chemical and Electrochemical Processes Effects of Copper Contamination by Copper Implantation Through the Backside of Wafer on MOS Device Performance p. 105
Volume Production Copper Plating Control p. 111
Development of New Chemistry for Copper Electroplating Process p. 121
Cu Corrosion Mechanisms and Control p. 127
An Alternative Metallic Seeding Technique for Subsequent Electrochemical Deposition of Copper Onto Barrier Metals p. 137
Direct Copper Electroplating p. 145
Characterization of Cu Surface Cleaning by Downstream N$_2$/H$_2$ Plasma p. 153
Stress and Impurities in Electroplated Copper p. 161
The Relation Between Self-Annealing Behavior and Microstructure of Electroplated Copper Films p. 167
In Situ STM Study of a Model Additive on Copper Single Crystal Surfaces p. 173
Bath Additive Concentration Effects on Super-Filling for Copper Damascene Electroplating p. 181
Kinetic Mechanism of Self-Annealing in Electroplated Copper Thin Films p. 187
Methodology of Quantitative Texture Analysis in Thin Films and Interconnects p. 193
Using SOM-Cu for ULSI Interconnections p. 199
Application of MESA Modeling for Chemical Mechanical Polishing p. 205
Non-Contact, In-Line Process Monitoring of Cu Bond Pad Thickness and Dishing p. 211
Advanced Preclean Process for Cu Damascene Applications

Finite Element Analysis of CMP Pad Displacement and Slurry Flow Characteristics

Effect of Pd Catalyst Adsorption on Cu Filling Characteristics in Electroless Plating

Convex-Surfaced, Cu-Damascene Interconnects Fabricated by Pad-Scanning, Local-CMP (PASCAL-CMP)

Electrochemical Study of Reactivity for Cu Orientation in CMP Slurry

Effects of Process Parameters on CMP Performance

Development of a Semiconductor Device-Cleaning Method Using a Cavitation Jet

Filling Profile Simulations of Electroplated Copper Films in Trenches

Evolution of Grain and Micro-Void Structure in Electroplated Copper Interconnection Lines

H Assisted Control of Quality and Conformality in Cu Film Deposition Using Plasma CVD Method

Diffusion Barriers

TEM/SEM Investigation and Electrical Evaluation of a Bottomless I-PVD Ta(N) Barrier in Dual Damascene

Studies of XLK Film Characterization and Integration in Copper Damascene Processes

The Atomic Layer CVD Growth of Titanium Nitride From an In Situ-Reduced Titanium Chloride

WN[subscript x] Film Deposition by PECVD Using WF[subscript 6]/N[subscript 2]/H[subscript 2] Gas Mixture

Growth of Tungsten Carbide Thin Films as Diffusion Barriers for Cu Metallization

Chemical Vapor Deposition of Tantalum and Tantalum Nitride

Properties of Ta and TaN Barriers and Sputtered Cu Seed Layers on Capped and Non-Capped Porous Silicon Oxide

The Novel Evaluation for Extremely Thin TaN[subscript x] Films as a Copper Barrier

Electroplating of Nickel-Tungsten Barrier Layers

Fluorine Diffusion Through Si[subscript 3]N[subscript 4], Ta, and TaN Barrier Layers

Via Yield Improvement Due to Optimization of PVD Seed/Barrier Deposition Process

Reactively Sputtered Ta[subscript 2]N and TaN Diffusion Barriers for Copper Metallization

Simulation of Barrier Layer Deposition for VLSI Applications Using 3D-Films

A Noble Metallization Process Using Preferential Metal Deposition (PMD)-Aluminum for Via

Hillock Defects During Deposition of Thin PVD Titanium For Barrier Metal Deposition

Impact of Temperature During Interconnect Sputtering of Ti/TiN by Hollow Cathode Magnetron

A Study of CVD Cu Adhesion on Various Barrier Metals by XPS

Barrier Properties of TiN Films Prepared by Flow Modulation Chemical Vapor Deposition (FMCVD)

Characteristics of WN Barrier Films Grown Using Thermal CVD Process With NH3 and SiH4 Reduction
LPCVD of TaCN Thin Film for Barrier Layer in Cu Interconnection

The Structure Control of Sputtered TaN Films on SiO$_2$ Through the Study of Evolutionary Selection Growth

Reliability

A Comparison of Reliability Aspects of a 0.35 [μm]m and 0.18 [μm]m Process Copper Metallization

Direct Observation of a Critical Length Effect in Dual Damascene Cu Interconnects

Non-Destructive High-Resolution In Situ Studies of the Electromigration in Passivated Cu Interconnects and Integrated Circuit Conductors by X-ray Microscopy

Mechanical Properties of Damascene Cu Lines During Thermal Cycling

Reliability Qualification of Copper BEOL for Manufacturing

Copper Reliability of Using PVD/CVD Composite Cu Layers as Seed for 0.10 [μm]m and Beyond Technology

Modeling Film and Via Electrical Resistance for 3D Structures Using 3D-Films

Mechanical Analysis of a SiLK/Cu Dual Damascene Interconnect System

3D Time-Depending Electro- and Thermomigration Simulation of Metallization Structures

A Computer Simulation of Void Dynamics Under the Action of Electromigration and Capillary Forces in Narrow Thin Interconnects

The Threshold Contact Area in Via Electromigration Lifetime

Stress Induced Void Formation in Co Silicide on Sub 100 nm Gate Poly

A New Evaluation Method of Contact Properties for the Establishment of Highly Reliable Copper Interconnects

Alternative Systems and Processes

Large Area, Rubber Stamped Plastic Sheets of Active Matrix Backplane Circuitry for Electronic Paper

3D Integration Using Wafer Bonding

Electroless Silver and Its Alloys for Interconnect Applications

Damascene Metal Gate Technology

Advanced Film Transfer System for STP Method in Planarization Technology

Low-Temperature SiO$_2$ Formation by Ultrahigh-Vacuum Chemical Vapor Deposition Using Plasma-Activated Oxygen and Disilane

Low-k Dielectric Materials and Characterization

Study on CMP Pattern Erosion for the Integration of a PECVD Low-k Material into the W Dual Damascene Process

The Impact of Mesoporous Silica Material Properties on Cu/Damascene Integration

Dielectric Barrier Material Evaluations for Cu/Low-k Interconnects

Porosity Characterization of Mesoporous Dielectric Thin Films Using Positron Annihilation Spectroscopy

Characterization of Plasma-Polymerized Divinylsiloxane Benzocyclobutene (DVS-BCB) Polymer Film

Novel Nanoporous Ultra Low-Dielectric Constant Poly(methyl silsesquioxane)

Characterization and Integration of a New Si-O-C Film Deposited by CVD
Comparative Study of Physical and Electrical Characteristics of F- and C-Doped Low-k CVD Oxides

Polysiloxane-Based Low-k Porous Silica Films Deposited by Plasma Enhanced CVD

The Effect of Deposition Parameters on the Trimethylsilane Based PECVD a-SiOC:H Low-k Films for Cu Damascene Process

A Comparison of TEOS and Silane Precursors for the Deposition of PE-CVD Fluorine Doped Glass (FSG) for Copper Damascene

Dependency of Basic Properties of Porous Silica ILD Thin Films in the k Range 1.6-2.7 on CMP Compatibility

Controllable Change of Porosity of SiOCH Low-k Dielectric Film

Novel Method of Estimating Dielectric Constant and Candidates for Ultralow-k (k<1.5) Materials

Low Dielectric Constant Porous Diamond Film Composed of Diamond Nano-particles

Preparation of Low-k Porous SiO[subscript 2] Films by SiO[subscript 2]/Organic Hybrid Chemical Vapor Deposition

Damascene Process Compatibility of Organic Low-k Dielectrics

Aluminum/Tungsten Systems and Processes

Local Environments of Cu Atoms in AlCu Thin Films Studied Using Extended X-ray Absorption Fine Structures

Electrochemical Study on Crystal Structure of Al-CMP

Chemical Passivation of TiN Underlayer as Anti-Oxidation Barrier for Enhancing the Nucleation of CVD-Al

A Theoretical Study on Al-CVD Using Dimethylamylamine Alane

The Orientation of Blanket W-CVD on the Underlayer Ti/TiN Studied by XRD
