Further steps towards licensing: underground characterization started for the spent fuel repository in Finland

The JNC generic URL research program - providing a knowledge base to support both implementer and regulator in Japan

Development of the Supercontainer design for deep geological disposal of high-level heat emitting radioactive waste in Belgium

IAEA's coordinated research programmes on performance of high level wastes in deep geological repositories

The role of the engineered barrier system in safety cases for geological radioactive waste repositories: an NEA initiative in co-operation with the EC

Coupling of chemical processes in the near field

CORALUS: an integrated in situ corrosion test on [alpha]-active HLW glass

Quantitative evaluation of the geochemical/microbiological processes within extended storage repositories

Importance of the excavation damaged zone (EDZ) in the general performance of the near-field of a geological disposal system: input of the EDZ component to the EC integrated project on the near-field (NF-PRO)

Impact of iron released from steel components on the performance of the bentonite buffer: a preliminary assessment within the framework of the KBS-3H disposal concept

The Belgian demonstration program for the disposal of high-level and long-lived radioactive waste

Testing of a near-field biogeochemical model against data from a large-scale gas generation experiment

Field test of ethanol/bentonite slurry grouting into rock fracture

A study on gas migration behavior in buffer material using X-ray CT method

Determining the transport properties of rock specimens using an improved laboratory through-diffusion technique

Sorption of molybdenum(VI) on synthetic magnetite

Studies on sealing performance of clay plug by the tunnel sealing experiment

Development of low alkaline cement considering pozzolanic reaction for support system in HLW repository construction

Effects of calcium ion in highly alkaline plume on permeability change of flow-path

Experimental study on the mechanism of ethanol/bentonite slurry grouting

Consolidation of ethanol/bentonite slurry injected in a planar fracture: mathematical modeling and experiment

Evaluation of the corrosivity of dust deposited on waste packages at Yucca Mountain, Nevada

Evaluating R&D progress in the context of the safety case

Waste package scenario modeling

Development of an uncertainty analysis methodology associated with the characterization of the geological environment: study on its applicability in the Tono area

A study of mechanical effect of simulated fault movement on engineered barrier system

Repository performance assessment and advanced fuel cycle models for input to decision making of options for nuclear waste and resource management
Modeling of groundwater flow and radionuclide transport in a high-level radioactive waste repository with multiple canisters  p. 243

Epistemic and aleatory uncertainty in recommended, general rock $K_d$ values used in performance assessment studies  p. 251

Development and application of knowledge-based source-term models for radionuclide mobilisation from contaminated concrete  p. 259

Modeling of transport in fractures with complex matrix properties  p. 267

A probabilistic methodology to determine acceptance criteria and failure probabilities for the KBS-3 ductile cast iron inserts  p. 275

Chemical durability and performance of assessment of spent fuel and high level waste forms under simulated repository conditions - Spanish contribution to IAEA project  p. 283

Chemical durability of high-level waste glass in repository environment : main conclusions and remaining uncertainties from the GLASTAB and GLAMOR projects  p. 293

SON68 glass dissolution kinetics at high reaction progress : mechanisms accounting for the residual alteration rate  p. 305

Assessing the durability of nuclear glass with respect to silica controlling processes in a clayey underground disposal  p. 313

Temperature dependence of long-term alteration rate for aqueous alteration of P0798 simulated waste glass under smectite forming conditions  p. 321

Validation of glass dissolution and Si diffusion parameters with a combined glass dissolution-diffusion experiment in boom clay  p. 329

Obtaining solubility constants to describe the incongruent dissolution of SON68 waste glass by an equilibrium ideal solid solution model approach  p. 337

Immobilization of simulated plutonium-contaminated material in phosphate glass : an initial scoping study  p. 345

Cold crucible vitrification of defense waste surrogate and vitrified product characterization  p. 353

HLW-glass dissolution and co-precipitation studies  p. 361

Modeling the alteration of SON-68 glass with nearfield materials  p. 369

Factors influencing the sulphate incorporation in radioactive waste glasses  p. 377

Kinetics of aqueous alteration of P0798 simulated waste glass in the presence of bentonite  p. 385

Role of ion exchange in the corrosion of nuclear waste glasses  p. 393

An overview of simple basic equations used in HLW glass dissolution modeling : consequences for long term leaching and element profiles  p. 401

Study of simulated HLW-glass leaching behavior under low oxygen repository condition  p. 411

Mechanisms governing the release of radionuclides from spent nuclear fuel in geological repository : major outcomes of the European project SFS  p. 421

Modeling of the spent fuel dissolution rate evolution for repository conditions : matrix alteration model results and sensitivity analysis  p. 433

Testing of uranium dioxide enriched with $^{233}$U under reducing conditions  p. 441

Electrochemical, SECM and XPS studies of the influence of $H$ on $UO_2$ nuclear fuel corrosion  p. 449

Oxidation kinetics of high burn-up UOX and MOX fuel : the influence of the grain boundaries  p. 457
Radiation-induced decomposition of U(VI) alteration phases of UO$_2$ p. 465

The effect of nearfield constraints on the corrosion behavior of high burnup spent fuel p. 473

Static dissolution tests of [alpha]-doped UO$_2$ under repository relevant conditions : influence of boom clay and [alpha]-activity on fuel dissolution rates p. 481

Assessment of the relevance of coffinite formation within the near-field environment of spent nuclear fuel geological disposals p. 489

Leaching behavior of non-irradiated and irradiated HTR UO$_2$-ThO$_2$ fuel particles under reducing conditions p. 497

Determination of alpha dose rate profile at the UO$_2$/water interface p. 505

Evolution of the spent nuclear fuel during the confinement phase in repository conditions : major outcomes of the French research p. 513

Leaching of cesium and uranium from spent PWR fuel in the gel-state clays p. 521

Effects of alpha self-irradiation on actinide-doped spent fuel surrogate matrix p. 529

Modeling experimental results on radiolytic processes at the spent fuel water interface : II. : radionuclides release p. 537

Radiation damage in pyrochlore and related compounds p. 549

Phase composition of the ceramics based on rare Earth, manganese and titanium oxides p. 559

Immobilization and behavior of technetium in a magnesium titanate matrix for final disposal p. 567

Leaching behavior of zirconolite in 0.001M citric acid at 90$^\circ$C under various flow regimes p. 575

Synthesis and characterization of transition metal substituted barium hollandite ceramics p. 583

Porous materials based on cenospheres of coal fly ash for fixation of Cs-137 and Sr-90 in mineral-like aluminosilicates p. 591

Phase relations in the systems based on yttrium, gadolinium, manganese, titanium and uranium oxides doped with calcium, aluminum and iron oxides p. 599

Leach resistant cesium and strontium-bearing wasteforms from hexagonal tungsten bronze-polyacrylonitrile composite adsorbers p. 607

Porous alumina-silica (Gubka) as a matrix for REE-TUE strip solution immobilization p. 615

Microchemical and crystallographic characterization of fluorite-based ceramic wasteforms p. 623

Composition driven structural phase transitions in the (Y[1-x]La)$\text{[subscript x]}$)[subscript 2]$\text{Ti}[\text{subscript 2}]\text{O}[\text{subscript 7}]$ system p. 631

Crystal chemistry and cation ordering in zirconolite 2M p. 639

Mechanical integrity of yttria-stabilized zirconia doped with Np oxide p. 647

Molten ceramic solidification during molten state processing of HLW p. 655

Mechanisms and modeling of waste/cement interactions - survey of topics presented at the meiringen workshop p. 663

Reactions in cemented nuclear waste forms - the need for a toolbox of different cement types p. 673

Bituminized waste leaching in restricted and free swelling conditions : mechanisms and analytical modeling p. 681

Ageing of eurobitum bituminised radioactive waste under gamma irradiation p. 689
Mixed organic and mineral waste processing by incineration-vitrification: case of bituminous media

The diffusion of radionuclides through waste encapsulation grouts

Kinetics of mixed low-level waste encapsulation using iron phosphate chemically bonded cement

39-years performance of cemented radioactive waste in a mound type repository

Immobilization of simulant ILW actinide wastes containing halides: effect of process parameters on wasteform properties

Deep disposal of eurobitum bituminized waste: scoping calculations of nitrate release

Bituminized waste re-treatment: replacement of the bitumen matrix by a glass matrix

Interaction swelling bitumen - host formation: scoping calculations

Sodium sulphate activated GGBS/PFA and its potential as a nuclear waste immobilization matrix

Probing the water phases and microstructure in a model cement blend matrix used for the encapsulation of intermediate level nuclear wastes

Silver zeolites: iodide occlusion and conversion to sodalite - a potential $^{129}\text{I}$ waste form?

Prediction of long term corrosion behavior in nuclear waste systems

The proposed Yucca Mountain repository from a corrosion perspective

A review of corrosion considerations of container materials relevant to underground disposal of high-level radioactive waste in Belgium

Further studies of the anaerobic corrosion of steel in bentonite

Development of a rapid screening test for SCC susceptibility of copper in disposal vault conditions

Creep of the copper canister in the Swedish program

A model for predicting stress corrosion cracking of copper containers in a deep geologic repository

Atmospheric stress corrosion cracking (ASCC) susceptibility of stainless alloys for metallic containers

Modeling corrosion processes for alloy 22 waste packages
