Foreword

Ordinary and Unordinary Results of Experiment "Pamir" on Interactions of Hadrons with Energies at 10-100 PeV p. 3

Discussions on Very High-Energy Interaction Studies p. 28

Cosmic-Ray Family Phenomenology of Visible Energy Greater than 500 TeV Observed in High Mountain Emulsion Chambers p. 42

Experimental Results Obtained from Pamir Emulsion Chamber by the Lodz University Group p. 66

Hadronic Families Observed in Pamir Emulsion Chambers and Study of Multiproduction Characteristics in the Fragmentation Region p. 81

Combination of Emulsion Chamber and Air Shower Array at Mt. Chacaltaya p. 88

The New Super Heavy Hadrons and the Primary Cosmic-Ray Spectra Break p. 94

Study on Cosmic-Ray Interactions in the Energy Region [actual symbol not reproducible] TeV p. 100

Cosmic Rays of Superhigh Energies p. 106

Analysis of the Hadronic Energy Spectrum in High-Energy Cosmic-Ray Families Detected by Emulsion Chambers p. 121

Air Shower Triggered Families: Simulation Calculation and its Comparison with Experimental Data p. 126

Inelasticity and Charge-Exchange Probability in Hadron-Air Interactions at 10-100 PeV p. 136

Muon Measurements with MACRO p. 142

Long Flying Component: Recent Data and Interpretation p. 154

Some Considerations on Normal and Exotic Events p. 168

Gamma-Hadron Families and their Model Interpretation p. 176

Detection of TeV Gamma Rays from the AGN Markarian 421 p. 185

Ultra-High-Energy Gamma Rays: Current Status p. 190

CASA-MIA: A "Precision" EAS Detector p. 207

UHE [gamma]-Rays from Point Sources Based on Grapes-I Observations p. 212

Recent Status of the Tibet AS[gamma] Experiment p. 219

Beam Fragmentation, Energy Flow, and Inelasticity Estimates in Minimum Bias Accelerator Experiments p. 231

Exotic Diffraction Dissociation in Cosmic Rays and Hadron Colliders p. 244

Recent Results from the L3 Collaboration p. 250

Properties of Events with Large Total Transverse Energy Produced in Proton-Antiproton Collisions at [actual symbol not reproducible] p. 258

Observation of Early Photon Conversions in High-Energy Cosmic-Ray Interactions p. 267

Results from JACEE and EMU05 p. 275

Observation of Heavy Cosmic-Ray Primaries over the Wide Energy Range from GeV/n to TeV/n p. 292

Hadron-Nucleus and Nucleus-Nucleus Interactions at Accelerator Energies p. 307

Global Characteristics of Oxygen and Sulfur Interactions in Emulsion at 200 GeV/Nucleon p. 314

Linear and Nonlinear Aspects of Relativistic Heavy Ion Interactions from EMU01 Results p. 325

Pion Asymmetry from Quark-Gluon Plasma p. 336
Combinant Analysis of Multiplicity Distributions p. 346
Rapidity Correlations in Ultra-Relativistic Nuclear Collisions p. 354
Intermittency and Multidimensional Correlations p. 364
Hadronic Microscopes for Nuclear Collisions p. 374
Nuclear Cross Sections p. 378
Some Aspects of Very High-Energy Cosmic Rays ([100 PeV) Propagation p. 387
Extrapolation of Hadronic Physics to Air Shower Energies p. 397
Spectrum-based Simulations of EAS in the 10\(^{4}\)-10\(^{9}\) Size Range p. 404

The Characteristics of Simulated Superfamilies of the Energy above 400 TeV Detected in p. 414
Gamma Block of an Emulsion Chamber

Photoproduction in Gamma Initiated Showers p. 419
Origin of Young EAS with \(E_{0}=1-10\) PeV at the Mountain Level p. 426
"Time-Track Complementarity" in the Study of EAS Longitudinal Development p. 431
A Scenario of Multi Particle Production at Very High Energies p. 435
Introduction to Neutron Astronomy p. 442
Limitation of Leading Particle Effect by Vector Meson and Resonances Produced in EAS p. 448

Fractal 'Hot Spots' and Structure Functions at Low \(X_{\text{Bj}}\) p. 454
Color Sextet Quarks and New High-Energy Interactions p. 459
Violation of Feynman Scaling and Law and its Consequences p. 466
"Anomalous" Air Showers from Point Sources: Mass Limits and Light Curves p. 472
What can we Learn about Inelasticity from Cosmic-Ray Studies p. 478
Stochastic Background of Atmospheric Cascades p. 484
Cosmic Rays, Gamma Rays, and Neutrinos from Point Sources p. 490
Electric Field Microfluctuations, caused by EAS in the Atmosphere p. 496
The Estimation of a Background for the Test of the LPM Effect p. 501
On Prompt Cosmic-Ray Muons and Neutrinos p. 505
Intensity of Single-[gamma] Halos p. 511
Cross Sections and Multiparticle Production at Supercollider Energies in the Dual Parton Model p. 516
Simulations of Multiparticle Production at High \(x_{F}\): Predictions for an SSC Detector p. 526
Monte Carlo Simulations of Long-Flying Cascades in Cosmic Rays and Leading Charm at 500 TeV p. 534

Can the Hadron Experiment Results be Explained without Exotic? p. 540
Extensive Air Shower Simulations with the Corsika Program p. 545
A Cascade Generator based on the Quark-Gluon String Model p. 554
A Correction to the Scale of Primary Energies Derived from Extensive Air Showers p. 560
Secondary Gammas in Extensive Air Showers p. 566
The Extensive Air Shower Project Kascade p. 575
The EAS-1000 Project p. 583
The Next Generation of Cosmic-Ray Experiments at the Highest Energies p. 592
