Precision Laser Spectroscopy of Atomic Hydrogen p. 3

Frequency Measurement of the 5S\[subscript 1/2\]-5D\[subscript 3/2\] Two-Photon Transition in Rubidium and Prospects For Measuring (He-Ne)/I\[subscript 2\] Lasers at [\lambda]=633 nm p. 9

Absolute Frequency Measurement of the 2S-8S/D Transitions in Atomic Hydrogen p. 11

Isotope Effect and Precision Measurement on the [actual symbol not reproducible] Transition of Helium p. 17

Precision Measurements with Cold Atoms p. 23

Observation of Long Range Molecular States of Na\[subscript 2\] By Photo-Associative Spectroscopy of Laser Cooled Na p. 29

Laser Cooling and Probing of a Trapped Strontium Ion Using All-Solid-State Lasers p. 35

Laser Spectroscopic Study of Dynamics of Laser-Cooled Ions in Paul Trap p. 38

Demonstration of the Microwave Trap for Cesium Atoms p. 40

Interference in the Resonance Fluorescence of Two Trapped Atoms p. 43

Optical Ramsey Interferences on Laser Cooled and Trapped Atoms Detected by Electron p. 49

Shelving Induced Trap Loss

On the Origin of Collisional Loss-Rate of \[superscript 7\]Li Trap p. 52

Polarization Gradients in 3-Dimensional Light Fields p. 55

Atom Interferometry p. 61

Moving Evanescent Light Grating for the Diffraction of Atoms p. 67

Suboptical Wavelength Position Measurement of Moving Atoms in a Light-Shift Gradient p. 70

Transverse Magneto-Optical Compression of a Frequency-Chirping Slowed Cesium Atomic Beam p. 73

New Optical Atomic Interferometers for Precise Measurements of Recoil Shifts. Application to Atomic Hydrogen p. 76

Coherent Beam Splitters and Mirrors for Atom Interferometry p. 79

Direct Experimental Observation of the Transition from Regularity to Chaos Using Lithium Atoms in Magnetic Field p. 87

Branching Ratio Spectroscopy p. 93

How Double-Rydberg Atoms Can Be Characterized as Planetary? p. 105

Doubly-Excited Ba States with a Circular Rydberg Electron p. 108

Laser Spectroscopy Tests for Berry's Geometrical Phase in Molecules p. 113

Experimental Evidence for the Double-Sheetedness of the Ground State Potential Surface of H\[subscript 3\] from Its UV Spectra p. 119

Infrared Kinetic Spectroscopy of Free Radicals Using Difference Frequency Generation p. 122

High Sensitivity and Precision Spectroscopy in the Far Infrared p. 128

Tunable Far Infrared Laser Spectroscopy of Clusters p. 139
Time-Resolved Observation of Laser-Excited C\textsubscript{60} Decay

Sub-Doppler Laser Spectroscopy of Small Metal-Clusters and Dimers

Laser Studies of Nitric Oxide Clusters

Sum-Frequency Vibrational Spectroscopy of Water Interfaces

Optical Nonlinearity of Pure Bacteriorhodopsin Langmuir-Blodgett Films Derived From Multi-Wave Mixing

Ultrafast Studies of Surface Dynamics: O\textsubscript{2}/Pd(111)

Spectroscopy of Liquids with Femtosecond FIR-Pulses

Laser Spectroscopy and Optical Pumping of Alkali-Metal Atoms in Superfluid Helium

Linear and Nonlinear Selective Reflection Spectroscopy

Observation and Measurement of the Casimir-Polder Force

Reflection of Metastable Neon Atoms by a Surface Plasmon Wave

Nonthermal Light-Induced Atom Desorption

Can We Rotate an Atom?

Inelastic Collisions of Cd\textsuperscript{3+}P\textsubscript{1} Atoms in an Hg-Cd Vapour Mixture

Collision Induced Fluorescence in Cs Vapor Excited by a Laser Diode

Strong-Field Regime, Laser-Induced Collisional-Energy-Transfer Spectral Profiles

Laser Instability and Chaos for Dynamic Spectroscopy of Atoms and Molecules

Interactions of Atoms with High-Field Single-Cycle Infrared Radiation

Evolution from Perturbative to Field-Ionization Regimes Through Electron Spectroscopy

Multiphoton Detachment of Negative Ions

Ionization of Na Atoms in Combined Microwave and Static Electric Fields

Stabilization of Rydberg Atoms

Novel Combustion Diagnostic Techniques Using Degenerate Four Wave Mixing

Time-Resolved Laser Spectroscopy for the Trace Analysis of PAH-Molecules in Water and in the Ground

Applications of Terawatt Lasers

Amplification Without Inversion Demonstrated with a Coherently Pumped A System in Cd-112

Nonlinear Optical Generation with Electromagnetically Induced Transparency in Atomic Hydrogen

Radiation Amplification at 53.7 and 58.4 nm in a Metastable He Beam

New Features of Strong Suppression and Shifting Phenomena in Resonant Excitations and Stimulated Emissions

Infrared-Visible Sum-Frequency Generation with a Free-Electron Laser

The Failure of the Fourier Transform in Nonlinear Spectroscopy

Phase-Mirror Control in Optical-Feedback Stabilized Diode Laser Systems Using Transverse Mode Patterns of the Locking Resonator

Measurement of the Intensity and Phase of a Single Ultrashort Pulse: A Simple and General Technique

Intensity Dependent Phase Shifts in Frequency Modulation Spectroscopy
