Recent and future technical trends of electrochemical microfabrication technology in Japanese electronics

Development of electroplating process for large format MCM-D

Electrochemical fabrication of PbSn C4 Interconnections

A plated through-hole interconnect technology in Silicon

Bias potential gold plating on tin

High aspect ratio photolithography with precise dimensional control

Scanning force microscopy investigations of photoresists

A review of deposition, patterning, and stress of metal films used as absorber in masks for Synchrotron X-ray lithography

UV depth lithography and galvanoforming for micromachining

Development of micromachining technologies using electroplated metals

The HI-MEMS alliance: electrochemical microfabrication manufacturing technology for MEMS

Through mask electroplating applied to the fabrication of microelectromagnet arrays

Electrochemical engineering aspects of microfabrication

The uniform injection cell: performance and scale-up criteria for single wafer processing

Autocatalytic electroless gold plating

Surface roughness and adhesion of electroless plated nickel on polysilicon

Effect of mask wall angle on shape evolution during through-mask electrochemical micromachining

Oscillatory behavior of titanium and aluminum alloys in acid chloride media

High rate anodic dissolution and jet electrochemical micromachining of tungsten

Synthesis of nanophase ceramic/metal composite coatings by electrochemical infiltration of sol-gel films

Nanometer ordering of electrochemical deposits of copper by organic additives

Detection of preferential crystallographic etching of polycrystalline copper using confocal laser scanning microscopy

Electronic and catalytic properties of nanostructured silver electrodeposits on glassy carbon and SnO\textsubscript{2} electrodes

Applications of porous silicon to microstructure fabrication

Electroluminescence at the interface between electrolyte and porous silicon

Porous silicon: metal plating and anodic oxidation

Electrochemical etch stop on n-type silicon by holes injected from a shallow p-type layer

Electrochemical etching of thin membranes on silicon surfaces containing integrated circuits

Using electrochemistry in device processing on poly(tetrafluoroethylene) substrates

Maskless Laser patterning of insulting films from salt solutions

Microfabrication of silicon via photoetching

Light induced metal deposition on TiO\textsubscript{2} single crystals and polycrystalline layers

Photoelectrochemical process for fabrication of abrupt metal-GaAS interfaces
Topography effects on metal etching process by using ion beam p. 386
Author index p. 401
Index of key words p. 405
