Multi-finger cursor techniques
symTone: two-handed manipulation of tone reproduction curves
Concurrent bimanual stylus interaction: a study of non-preferred hand mode manipulation
TNT: improved rotation and translation on digital tables
Style components
Realistic and interactive simulation of rivers
Particle-based immiscible fluid-fluid collision
Spherical billboards and their application to rendering explosions
Faster cascading menu selections with enlarged activation areas
Performance measures of game controllers in a three-dimensional environment
Human on-line response to visual and motor target expansion
Early-split coding of triangle mesh connectivity
Compression of time varying isosurfaces
Surfacing by numbers
Streaming compression of tetrahedral volume meshes
Evaluation of viewport size and curvature of large, high-resolution displays
The importance of accurate VR head registration on skilled motor performance
Increased display size and resolution improve task performance in information-rich virtual environments
Phrasing techniques for multi-stroke selection gestures
Fluid inking: augmenting the medium of free-form inking with gestures
Superflick: a natural and efficient technique for long-distance object placement on digital tables
HingeSlicer: interactive exploration of volume images using extended 3D slice plane widgets
Image synthesis using adjoint photons
Light animation with precomputed light paths on the GPU
Rendering geometry with relief textures
Fast GPU ray tracing of dynamic meshes using geometry images
Implementing the render cache and the edge-and-point image on graphics hardware
Cycle shading for the assessment and visualization of shape in one and two codimensions
Generating custom notification histories by tracking visual differences between Web page visits
The impact of task on the usage of Web browser navigation mechanisms
A case-study of affect measurement tools for physical user interface design
