Preface

Modeling resource management in concurrent computing systems  p. 3
Application-level concurrency management  p. 19
Optimizing object oriented programs based on the byte code-defined data dependence graphs  p. 31
Power-aware multimedia streaming in heterogeneous multi-user environments  p. 44
Service-oriented naming scheme for wireless ad hoc networks  p. 60
A proposal and evaluation of the fast reconnect ad-hoc network routing protocol  p. 74
Resource bartering in grids  p. 83
Dynamic SMP clusters as the architectural solution for fine-grain numerical computations  p. 96
Diffusing mobile processes  p. 111
A compositional semantics for Petri net reactive modules  p. 131
Transaction processing for clustered virtual environments  p. 146
The challenges and the promise of quantum parallelism  p. 159
Common mechanisms for supporting fault tolerance in DSM and message passing systems  p. 175

Synchronization based on global states as a general control method in parallel programs  p. 184
Middleware-based load balancing for communicating Java objects  p. 194
An XML/RDF-based proposal to exchange information within a multi-agent system  p. 203
A pattern-based software engineering tool for grid environments  p. 213
Parallel implementation of multi-population differential evolution  p. 223
Infection simulation  p. 233
Efficient fine-grain computations based on remote DMA communication with rotating buffers  p. 243
Parallelizing the training phase of back-propagation in a LAN of workstations  p. 253
Task graph structuring for dynamic SMP clusters with communication on-the-fly  p. 261
Application of the Runge-Kutta-Fehlberg method in the speculative method of transient states analysis  p. 271
Block organization of parallel algorithms for electrostatic and electromagnetic fields analysis  p. 279
Evaluation of the parallel algorithms of the FDTD method with the "stripes" decomposition of the space domain  p. 287
An O(n2) parallel algorithm for the maximum flow problem  p. 294
Parallel version of the global linearization method  p. 301
CFDA : a CCA-based component framework for distributed applications  p. 309
