A model for describing and annotating documents
Web ontology languages: theory and practice - will they ever meet?
Object order based on concept analysis and Moebius inversion function
A semantic spectrum analyzer for realizing semantic learning in a semantic associative search space
Theory and implementation on automatic adaptive metadata generation for image retrieval
A meme media framework for introducing a multimodal user interface to existing Web applications
Privacy enhanced information systems
Description logics, data modelling and relational dependencies
Modelling, searching and utilising grid resources and services
Conceptual modelling (and problem solving techniques) for complex narrative events
Role of models in knowledge transfer during OO software development
Toward a cooperative recognition of human behaviors and related objects
A reliable and useful information distribution system: the "Kuchicomi network"
Object-oriented model for fire spread prediction
Knowledge entry maps: structuring of method knowledge in the IT industry
Building a conceptual skeleton for enterprise architecture specifications
Fixed-point quantifiers in higher order logics
Discovery of narrativity on the WWW based on perspective information access
A computer science text corpus/search engine X-tec and its applications
Deriving semantic from images based on the edge information
Evolving the database co-design framework by SPICE
Reconstructing geons in database semantics
Query optimisation as part of distribution design for complex value databases
Position paper: digital media archive for academic resources
An ontology learning and reasoning framework
Strong relevant logic as the universal basis of various applied logics for knowledge representation and reasoning
Concept theory in the context of information systems
Describing knowledge architectures
