Reaction-diffusion intelligent wetware
Evolutionary robotics for legged machines: from simulation to physical reality
Real world informatics environment system
Understanding and realization of constrained motion - human motion analysis and robotic learning approaches
The specifiability requirement in mobile robot self-localization
Ghost-goal algorithm for reactive safe navigation in outdoor environments
Autonomous robot vision system for environment recognition
Multi-resolution field D*
Path and observation planning of vision-based mobile robots with multiple sensing strategies
Mobile robot motion planning considering path ambiguity of moving obstacles
Robotic navigation using harmonic functions and finite elements
The hippocampal place cells and fingerprints of places: spatial representation of animals, animats, and robots
Incremental reconstruction of generalized Voronoi diagrams on grids
Learning from nature to build intelligent autonomous robots
A laser based multi-target tracking for mobile robot
Simultaneous environment mapping and mobile target tracking
Omnidirectional active vision for evolutionary car driving
Map of color histograms for robot navigation
Designing a system for map-based localization in dynamic environments
Appearance-based localization of mobile robots using local integral invariants
Enhancing self covertness in a hostile environment from expected observers at unknown locations
An experimental study of distributed robot coordination
Single-sensor probabilistic localization on the SeReS self-reconfigurable robot
Mutual localization and 3D mapping by cooperative mobile robots
Exploration of complex growth mechanics of city traffic jam for the adaptive signal control
Coordinated control of mobile antennas for ad-hoc networks in cluttered environments
An adaptive behavior of mobile ad hoc network agents
Learning the cooperative behaviors of seesaw balancing agents - an actor-critic approach
Evolutionary reinforcement learning for simulated locomotion of a robot with a two-link arm
Movement control of tensegrity robot
An adaptive neural controller for a tendon driven robotic hand
Self-organizing route guidance systems based on coevolution of multi-layered guidance vector fields
Object transportation using two humanoid robots based on multi-agent path planning algorithm
Cognitive map plasticity and imitation strategies to extend the performance of a MAS p. 326
Examination of abilities based on pseudolite system for indoor positioning p. 334
A memory-based PID controller for indoor airship robot p. 341
Co-evolutionary design for AGV systems p. 349
An update method of computer simulation for evolutionary robotics p. 357
Vision-based teleoperation of a mobile robot with visual assistance p. 365
Adaptive control strategy for micro/nano manipulation systems p. 375
Smart roadster project: setting up drive-by-wire or how to remote-control your car p. 383
A reactive approach for object finding in real world environments p. 391
A geometric approach for an intuitive perception system of humanoids p. 399
Autonomous learning of a topological model in a road network p. 408
Reinforcement learning performance evaluation: an evolutionary approach p. 416
Quantify distinguishability in robotics p. 425
Group transport along a robot chain in a self-organised robot colony p. 433
Growing virtual neural tissue: binding spiking neurons through sensory input p. 443
Hormone-inspired adaptive distributed synchronization of reconfigurable robots p. 455
Spatial prisoner's dilemma in a network environment introducing heterogeneous information distribution p. 463
Behavioral decision for multi-agent systems with dynamic interaction p. 471
Co-creative composition using multiagent learning: toward the emergence of musical structure p. 479
Self-assembly of mobile robots: from swarm-bot to super-mechano colony p. 487
Lot release control using genetics based machine learning in a semiconductor manufacturing system p. 497
Design of an AGV transportation system by considering management model in an ACT p. 505
Analysis of purchase decision making: network externalities and asymmetric information p. 515
Emergence of insect navigation strategies from homogeneous sensorimotor coupling p. 525
Active learning of local structures from attentive and multi-resolution vision p. 534
Modular design of home service robot system with hierarchical colored petri net p. 542
Auctions for task allocation to robots p. 550
Exploration of natural dynamics through resonance and chaos p. 558
One-legged locomotion with a compliant passive joint p. 566
Analysis of dynamical locomotion of two-link locomotors p. 574
A modular robot that self-assembles p. 585
Autonomous robust execution of complex robotic missions p. 595
Emergence of small-world in ad-hoc communication network among individual agents p. 605
Parametric path planning for a car-like robot using CC steers p. 613
Self-organizing planner for multiple mobile robot exploration and patrol p. 622
Adaptive action selection of body expansion behavior in multi-robot system using communication p. 632
From mobility to autopoiesis: acquiring environmental information to deliver commands to the effectors

Cooperative agent behavior based on special interaction nets

A framework for advanced robot programming in the RoboCup domain - using plug-in system and scripting language

Major behavior definition of football agents through XML

Getting back on two feet: reliable standing-up routines for a humanoid robot

Ball tracking with velocity based on Monte-Carlo localization

Fast vector quantization for state-action map compression

Incremental purposive behavior acquisition based on modular learning system

Simple form recognition using Bayesian programming

Towards robust state estimation with Bayesian networks: a new perspective on belief propagation

HRP-2W: a humanoid platform for research on support behavior in daily life environments

Human supporting production cell "attentive workbench"

A foveal 3D laser scanner integrating texture into range data

Autonomous collaborative environment for project based learning

Pedaling motion of a cycle by musculo-skeletal humanoid with adapting ability based on an evaluation of the muscle loads

Behavior transition between biped and quadruped walking by using bifurcation

Tendon arrangement based on joint torque requirements for a reinforceable musculo-skeletal humanoid

Vision-based virtual information and semi-autonomous behaviours for a humanoid robot

Load distributed whole-body motion generation method for humanoids by minimizing average joint torque ratio

Measurement and simulation verification of reflexive responses to perturbation during walking

Toward a human-like biped robot with compliant legs

Using JavaSpace for a PEIS ecology

A new heating method for the actuation of the shape memory alloy (SMA) actuator

Informational organization on network among multiple agents

A flexible task knowledge representation for service robots

Intelligent autonomous Japanese comic "MANGA" designing support system

Behavior induction by geometric relation between symbols of multi-sensory pattern

Effects of robotic arm orthosis behaviors to user's motion structure: qualitative assessment using arm trajectory profiles

A human behavior discrimination method based on motion trajectory measurement for indoor guiding services

Effects of shared communicational modality to joint activity of human operator and robot autonomy

Learning of object identification by robots commanded by natural language

An f-MRI study of an EMG prosthetic hand biofeedback system

Wearable inertial sensors for arm motion tracking in home-based rehabilitation
Learning and control model of arm posture p. 938
Competitive learning method for robust EMG-to-motion classifier p. 946
Mutual adaptation among man and machine by using f-MRI analysis p. 954
Behavior generation of humanoid robots depending on mood p. 965
Construction of human-robot cooperating system based on structure/motion model p. 973
Motion assist devices for rehabilitation using parallel wire mechanisms p. 981
Analysis of skill acquisition process - a case study of arm reaching task p. 991
Generation of size-variable image template for self-position estimation considering position shift p. 999
Subjective age estimation using facial images - the effects of gender, expressions and age groups p. 1007
Evaluation and suppression of overrun of microorganisms using dynamics model for microrobotic application p. 1015
From muscle to brain : modelling and control of functional materials and living systems p. 1025
Using the Sony AIBOs to increase diversity in undergraduate CS programs p. 1033
