In memory of professor Zdzislaw Pawlak

Life and work of Zdzislaw Pawlak (1926-2006)

Arrow logic with arbitrary intersections : applications to Pawlak's information systems p. 1

Rough set approach to behavioral pattern identification p. 27

Multiset-based self-assembly of graphs p. 49

Entropies and co-entropies of coverings with application to incomplete information systems p. 77

Rough sets and learning by unification p. 107

Rough dialogue and implication lattices p. 123

On string languages generated by spiking neural P systems p. 141

Relative nondeterministic information logic is EXPTIME-complete p. 163

A correspondence framework between three-valued logics and similarity-based approximate reasoning p. 179

A possibility-theoretic view of formal concept analysis p. 195

A multi-modal logic for disagreement and exhaustiveness p. 215

Complexity issues in multiagent logics p. 239

Reaction systems p. 263

Cooperative world modeling in dynamic multi-robot environments p. 281

Towards a pragmatic mereology p. 295

Pawlak's information systems in terms of Galois connections and functional dependencies p. 315

Z. Pawlak, a precursor of DNA computing and of picture grammars p. 331

Locally derivable graphs p. 335

On construction of partial reducts and irreducible partial decision rules p. 357

Retracts of algebras p. 375

Bridging the gap between non-symbolic and symbolic processing - how could human beings acquire language p. 385

Near sets : special theory about nearness of objects p. 407

Concept approximation in mathematics and computer science. An essay in homage to Zdzislaw Pawlak p. 435

Approaches to conflict dynamics based on rough sets p. 453

Subword balance in binary words, languages and sequences p. 469

Histogram thresholding using beam theory and ambiguity measures p. 483

On generating all binary trees p. 505

Behaviour algebras p. 537
