

Xenograft models of human prostate cancer	p. 3
The pathology of human prostatic atrophy and inflammation	p. 33
Tissue microarrays in prostate cancer research	p. 49
Prostate (cancer) stem cells	p. 63
Cancer-host interactions : a paradigm shift brings new understanding and new opportunities	p. 73
Androgen receptor function in prostate cancer progression	p. 87
Hedgehog signaling in development and cancer	p. 107
Cholesterol, cell signaling, and prostate cancer	p. 119
Gene therapy for advanced prostate cancer	p. 139
Role of transforming growth factor-[beta] in immunotherapy of prostate cancer	p. 165
Biology and therapeutic basis of prostate cancer bone metastasis	p. 175
Molecular imaging : noninvasive strategies to visualize gene expression in living subjects	p. 193
Quantum dot nanotechnology for prostate cancer research	p. 232
Expression profiling of prostate cancer progression	p. 247
Somatic alterations in prostate cancer progression	p. 269
Linkage studies of prostate cancer families to identify susceptibility genes	p. 285
Somatic DNA methylation changes and prostatic carcinogenesis	p. 302
Telomeres, telomerase, chromosome stability, and prostate cancer	p. 327
Racial differences in prostate cancer mortality	p. 355
Radiotherapy for the treatment of locally advanced prostate cancer	p. 377
Recombinant antibody candidates for treatment of prostate cancer	p. 397
Differentiation agents and epigenomic therapies : an overview and potential use for prostate cancer	p. 422
Taxane-based chemotherapy for prostate cancer	p. 445
Co-targeting therapeutics for hormone refractory prostate cancer	p. 463
Intercellular targets of prostate cancer	p. 475
Novel and efficient translational clinical trial designs in advanced prostate cancer	p. 487
