Preface

Problems of risk estimation under uncertainty conditions

Light-traffic analysis of some queuing models with losses

Integrated Modeling for Management of Catastrophic risks: Spatial Stochastic Optimization Model

Fast simulation technique in reliability evaluation of a Markovian and Non-Markovian systems

Reduction measurements for calculation in Fuzzy experiment scheme and soft modelling of dynamic processes in Non-crisp conditions

Development of new mathematical models and methods for determining critical states of nuclear plant reactors

Investigation of bayesian estimates for binomial failure models

Investigation of sensitivity of bayesian estimates for exponential failure models

Multicriteria optimal design problems of ecologically dangerous objects and numerical methods for their solving
