Historical and Cultural Perspectives

A Précis of Psychopathological History p. 3
Themes in the Evolution of the 20th-century DSMs p. 53
On the Wisdom of Considering Culture and Context in Psychopathology p. 72
Cultural Issues in the Coordination of DSM-V and ICD-11 p. 97
A Sociocultural Conception of the Borderline Personality Disorder Epidemic p. 111
Conceptual Issues in Classification

Philosophical Issues in the Classification of Psychopathology p. 127
Classification Considerations in Psychopathology and Personology p. 149
Diagnostic Taxa as Open Concepts: Metatheoretical and Statistical Questions about Reliability and Construct Validity in the Grand Strategy of Nosological Revision p. 174

Contemplations on Meehl (1986): The Territory, Paul's Map, and Our Progress in Psychopathology Classification (or, the Challenge of Keeping Up with a Beacon 30 Years Ahead of the Field) p. 187
Issues of Construct Validity in Psychological Diagnoses p. 205
The Meaning of Comorbidity among Common Mental Disorders p. 223
The Connections between Personality and Psychopathology p. 242
Is It True That Mental Disorders Are So Common, and So Commonly Co-Occur? p. 263
Taking Disorder Seriously: A Critique of Psychiatric Criteria for Mental Disorders from the Harmful-Dysfunction Perspective p. 275
Methodological Approaches to Categories, Dimensions, and Prototypes
On the Substantive Grounding and Clinical Utility of Categories versus Dimensions p. 303

A Short History of a Psychiatric Diagnostic Category That Turned Out to Be a Disease p. 324
Concepts and Methods for Researching Categories and Dimensions in Psychiatric Diagnosis p. 337
The Integration of Categorical and Dimensional Approaches to Psychopathology p. 350
Dimensionalizing Existing Personality Disorder Categories p. 362
An Empirically Based Prototype Diagnostic System for DSM-V and ICD-11 p. 374
The Millon Personality Spectrometer: A Tool for Personality Spectrum Analyses, Diagnoses, and Treatments p. 391
Innovative Theoretical and Empirical Proposals

Neuroscientific Foundations of Psychopathology p. 419
Using Evolutionary Principles for Deducing Normal and Abnormal Personality Patterns p. 453

Biopsychosocial Models and Psychiatric Diagnosis p. 473
Reactivating the Psychodynamic Approach to the Classification of Psychopathology p. 483
A Life Course Approach to Psychoses: Outcome and Cultural Variation p. 515
The Interpersonal Nexus of Personality and Psychopathology p. 523
Reconceptualizing Autism Spectrum Disorders as Autism-Specific Learning Disabilities and Styles p. 553
Describing Relationship Patterns in DSM-V: A Preliminary Proposal p. 565
On the Diversity of the Borderline Syndromes p. 577
