The purpose of site-specific therapy

Local drug delivery: impact of pressure, substance characteristics, and stenting on drug transfer into the arterial wall

Catheter-based and stent-based treatment for coronary artery disease

The ClearWay microporous balloon catheter

The dispatch coronary infusion catheter

The remedy PTCA dilatation infusion catheter

The infiltrator angioplasty balloon catheter

The infiltrator local drug delivery catheter

The needle catheter

Stent-mediated local drug delivery

Silicon carbide-coated stents

Carbostent: a carbofilm-coated stent

The PC-coated BiodivYsio stent

PTFE-covered stents

Overview of drug delivery coatings

Phosphorylcholine (PC Technology) coated stents as a drug delivery platform

Direct stent coating: an alternative for polymers?

Radioactive stents

Overview of potential drugs to inhibit in-stent restenosis

Direct antithrombins

Tissue factor inhibitors

Nitric oxide-related interventions and restenosis

Vitamin E and its multiple properties: anti, pro, and non-oxidative activities

The dexamethasone eluting stent

Anti-inflammatory approaches to restenosis

The role of matrix metalloproteinase inhibitors after arterial injury

Methotrexate: a potential drug for stent-mediated local drug delivery: anti-inflammatory and antiproliferative characteristics

Actin-skeleton inhibitors: potential candidates for local drug delivery in the prevention of in-stent restenosis?

Local delivery of antisense to c-myc for the prevention of restenosis

Site-specific delivery of cytostatic agents

Catheter-based delivery of NOS gene

Carbon-coated stents: diamond-like stent coatings

Long-term biocompatibility evaluation of poly-bis-trifluoroethoxyphosphazene (PTFEP): a novel biodegradable polymer stent coating in a porcine coronary stent model

Biocompatibility evaluation of biosoluble stent coatings in a porcine coronary stent model

Glycoprotein (GP) GIIb/IIa receptor antagonist eluting stents

Activated protein C eluting stents
Local methylprednisolone delivery using a BiodivYsio phosphorylcholine (PC)-coated drug delivery stents reduces inflammation and neointimal hyperplasia in a porcine coronary stent model

Methotrexate loaded BOBSC-coated coronary stents reduce neointimal hyperplasia in a porcine coronary model

Rapamycin eluting stents

Preclinical evaluation of tacrolimus-coated coronary stents

Local delivery of paclitaxel as a stent coating

Addition of cytochalasin D to a biodegradable oil stent coating inhibits intimal hyperplasia in a porcine coronary model

Vascular endothelial growth factor (VEGF) eluting stents

An advanced antisense for local and stent based delivery for prevention of restenosis

Stent-based gene delivery

Catheter-based local heparin delivery

Local delivery of low molecular weight heparins

Local delivery of steroids before coronary stent implantation

Clinical studies with the carbostent

Gold-coated stents

Heparin-coated stent trials

The blue medical 50% TEMPO coronary stent : preclinical studies and the first clinical pilot trial

Dexamethasone : mode of action, preclinical, and clinical studies

17[beta]-estradiol-eluting stents : a potential therapy in the prevention of restenosis

Batimastat : mode of action, preclinical, and clinical studies

The FIM trial : sirulimus eluting stents

Tacrolimus eluting stents

Everolimus eluting stents

The quantum drug eluting stent and the SCORE trial

The Boston scientific paclitaxel eluting stent : TAXUS I and II

Clinical results with non-polymer based taxol eluting stents. The European evalLUation of paciTaxel eluting stent (ELUTES) trial

Intrapericardial drug delivery for prevention of restenosis

Alternatives to drug eluting stents : safety and efficacy of systemic delivery of antiproliferative therapy to reduce in-stent neointimal hyperplasia

Drug eluting stents : a critical perspective
