Seismic wave scattering by inhomogeneous geological deposits with cracks p. 3
Settlements and pore pressure generation in sand during earthquakes - physical phenomena and their 1-D description p. 13
Accelerograms for building design for hard soil in Mexico City p. 23
Empirical arias intensity attenuation relationships for the seismic hazard analysis of Greece p. 33
Evaluation of the liquefaction potential of soil deposits based on SPT and CPT test results p. 43
Critical evaluation of near-field seismic records in Greece p. 53
An application of the seismic microzonation to the critical facilities in the city of Ensenada, Baja California, Mexico p. 63
Site effect evaluation in Sellano (Italy) by 1-D and 2-D numerical analyses p. 73
Simulation of earthquake ground motion for generation of artificial accelerograms p. 83
Damage controlled seismic design of quasi-brittle beam structures p. 95
Seismic design of braced frame gusset plate connections p. 105
Earthquake analysis of multidrum columns p. 115
An aseismic design method for preventing damage of a soil-pile foundation-superstructure system p. 127
Seismic analysis and design of a precast concrete framed structure p. 137
Improvement of seismic capacity of external beam-column joints using rectangular spiral shear reinforcement p. 147
Seismic design of steel frames with partial strength joints p. 157
Incorporation of the soil-structure interaction into performance-based design p. 171
Variation of response with incident angle under two horizontal correlated seismic components p. 183
Studying the educational places in the earthquake-prone southern regions of the Khorasan province p. 193
On the pushover analysis as a method for evaluating the seismic response of RC buildings p. 203
The effect of column shape on seismic performance of 3D RC framed structures with and without infill walls using pushover analysis p. 219
An immediate evaluation method of earthquake damage of dams by utilizing real-time earthquake information p. 229
Behavior of rigid bodies in buildings p. 239
Inelastic seismic response comparison of two 15 and 25 level buildings of reinforced concrete with and without shear walls p. 249
Seismic response of a single story innovative steel frame system p. 259
A study on hysteresis plastic energy input into single and multi degree of freedom systems subjected to earthquakes p. 269
Required rotational and horizontal stiffness of lateral support for H-shaped compression members with eccentric braces p. 281
Effects of configurations of shear walls on system behavior under seismic load p. 291
Evaluation of economic loss for structures in the area struck by the 7/9/1999 Athens earthquake and comparison with actual repair costs p. 301
Analysis of earthquake wave propagation in buildings p. 313
Dynamic poroelastic soil pressures on a pair of rigid retaining walls experiencing base rotation p. 323
Seismic response analyses of rocking structural systems with yielding base plates by the finite element method p. 333
The seismic energy dissipation mechanism of rocking structural systems with yielding base plates p. 343
Dynamic analysis of beams including warping and shear deformation effects: application in bridge deck analysis p. 355
Investigation of the perturbing natural frequencies through an evolutionary material trimming process p. 365
Simplified non-linear time-history analysis based on the theory of plasticity p. 375
Damping and its importance to structure p. 387
Earthquake resistant design of a transformer p. 395
Modeling of higher-mode effects using an optimal multi-modal pushover analysis p. 405
The dynamic and earthquake response of a bridge pier model at the Volvi European test site p. 417
Behavior of bare and masonry infilled R/C frames under cyclic loading: experiments and analysis p. 429
Cyclic load behaviour of reinforced concrete beam-column subassemblages of modern structures p. 439
Shaking table dynamic tests of a granular deposit p. 451
Innovative materials for bridge seismic design p. 463
Numerical study on the behavior of cables of cable-stayed bridges p. 473
The problem of minimum cost for structural members of earthquake resistant bridges p. 485
Short wall-like piers of R/C monolithic bridges under seismic loading: EC8 provisions and experimental results p. 497
Reduction of inertial seismic forces in bridges by using the abutment backwall as a "yielding" stopper p. 507
Seismic analysis and retrofit of a historic masonry building p. 523
Developments in the architecture of earthquake resistant high-rise buildings in the period from the end of the 18[superscript th] to the beginning of the 20[superscript th] century p. 533
Static and dynamic analysis of masonry buildings by a nonlinear 3-D FEM p. 545
Design of seismic retrofitting of reinforced concrete structures p. 557
Investigation of the effectiveness of two styles of R/C jackets in pre-earthquake retrofitting of columns and b/c joints of R/C structures p. 567
Ductility performance of RC beams strengthened with CFRP sheets p. 579
Strengthening of infilled RC frames by CFRP p. 591
Experiments on seismic retrofitting of in-plane loaded masonry walls with fibre composites p. 601
Static cyclic tests on URM walls after retrofitting with hardwires and GFRP p. 611
Analysis and assessment of a seismically isolated bridge p. 625
Seismic protection of bridges using viscous dampers p. 637
Using mushroom shaped basements under buildings as an isolator in order to reduce the earthquake effect on structures p. 651
