Numerical experiences with parallel clusters for generating Pareto surfaces: application in structural topology optimization  
Global versus local statement of stress constraints in topology optimization of continuum structures  
Block aggregation of stress constraints in topology optimization of structures  
Design of experiments and optimization of composite structures using solid-shell elements  
Evaluation of extended stochastic schemata exploiter  
Shape optimization of composites based on minimum potential energy  
Optimization of geometry for the lateral buckling process of a cantilever beam  
Geometric optimization of shells  
Genetic algorithms and finite element coupling for mechanical optimization  
Towards the optimization of photoacoustic sensors  
MINLP cost optimization of industrial steel building  
Parametric optimization of steel floor system cost using Evolver  
Selection of optimum structural systems and materials  
Threshold accepting optimization of road vaults and rectangular hollow bridge piers  
VTOP - an improved software for design optimization of prestressed concrete beams  
Optimal design of fatigue loaded heavy-duty machine spring elements  
Non-parametric shape optimization method for thin-walled structures under strength criterion  
A study on torsional stiffness of the competition go-kart frame  
Active vibration suppression of a flexible link manipulator using piezoelectric actuator  
Aerodynamic optimization of a biplane configuration using differential evolution  
Design optimization application in accordance with product and process requirements  
Evaluation of optimum landfill design: mid Auchencarrock experimental landfill emissions  
Optimization of surface utilization using heuristic approaches
