Steady wave drift force on basic objects of symmetry p. 3
The effect of radiation velocity potentials on the drift force on a submerged sphere p. 15
Evaluation of hydrodynamic effects on elevated cone-shaped water tanks p. 25
Comparison of three probability models for offshore structural response due to Morison wave loading p. 37
Economizing the stability of rubble-mound breakwaters using artificial neural network p. 47
Numerical modelling of disconnectable turret mooring systems p. 61
Response of free standing flexible cylinders to waves p. 75
Development of SCR VIV in a changing flow field p. 85
Technology for offshore wind turbines p. 95
Analysis of dam-reservoir interaction by employing the modified-efficient fluid hyper-element p. 111
Coupling between beam-type vibration and oval-type vibration of a cylindrical water storage tank p. 121
Simulation of wave propagation in flexible hoses p. 131
Numerical solution of compressible fluid flow in porous media with boundary element method p. 143
Application of pseudo-symmetric technique for seismic analysis of concrete arch dams p. 153
Hydroelastic vibration of a rectangular perforated plate with a simply supported boundary condition p. 163
Structural optimization of a small aircraft wing from aeroelastic responses p. 173
Numerical simulation of wind effects on an airport air traffic control tower p. 183
Instability of an elliptical flow: weakly nonlinear analysis p. 193
Fluid structure around a tilted rectangular cylinder near a solid wall and induced loading p. 205
Aerodynamic continual weft brake p. 215
Downstream hydraulic geometry for incised channel p. 225
Use of prestressed concrete cylinder pipes as composite breakwaters: implementation criterion p. 235
Hybrid analysis method using CFD and analytical solutions on fluid elastic vibration of circular cylinder arrays p. 247
Fluid-structure coupling analysis and simulation of a slender structure p. 259
An experimental investigation of collapsible tube flows at the onset of self-excited oscillations p. 269
Fluid flow and pressure effects in phase-field models for solidification p. 281
Numerical modelling of gas-solid interface for homogeneous propellant combustion p. 289
Numerical and theoretical analysis of shock waves interaction and reflection p. 299
Fast multipole boundary element method for the simulation of acoustic-structure interaction p. 313
Self-excitation analyses of vocal chord under breathing flow and frequency change by muscle activation p. 321
Interaction between main line standing waves and side branch resonance frequencies p. 337
