Introduction

Aims

The Classification of Drugs
Targets for the Medicinal Chemist
The Stages in the Development of a Drug
The Synthesis of a Drug
The History of Medicinal Chemistry
General Principles of Medicinal Chemistry
Aims

Administration and Absorption
The Gastrointestinal Tract
Other Routes of Administration
Physico-Chemical Measurements
Formulation

Drug Metabolism
Oxidation by Cytochrome P450s
The Hydroxylation of Aromatic Rings
The Hydroxylation of Aliphatic Systems
The Monoamine Oxidases
Other Phase One Changes
Phase Two Changes

Excretion

Pro-Drugs

Quantitative Structure: Activity Relationships
Hansch QSAR Analyses
Craig Plots and the Topliss Decision Tree

Drug: Receptor Interactions

Neurotransmitters as Targets
Aims

Introduction

The Nervous System
The Neurotransmitters
Cell-Surface Receptors
Ion-Channel-Linked Receptors
Kinase-Linked Receptors
G-Protein-Linked Receptors
Agonists and Antagonists
Acetylcholine
Neuromuscular Blocking Agents in Surgery
Muscarinic Agonists
Local Anaesthetics
Catecholamines as Neurotransmitters
The Adrenergic Receptors
a-Adrenergic Receptor Agonists
b-Adrenergic Receptor Agonists - The Development of Anti-Asthma Drugs
b1-Adrenergic Antagonists 'b-Blockers'
The Treatment of Hypertension
Medicinal Chemistry and the Central Nervous System
Aims
Introduction
The Treatment of Neurodegenerative Diseases
Dopamine Antagonists as Neuroleptic Agents
Serotonin as a Neurotransmitter
The Treatment of Depression
GABA as a Neurotransmitter
The Treatment of Epilepsy
Benzodiazepines as Anxiolytic Agents
Barbiturate Sleeping Tablets
Opioids as Analgesics
Local and Circulatory Hormone Targets
Aims
Introduction
Histamine as a Target
Histamine Antagonists in the Treatment of Peptic Ulcers
The Prostaglandins and Non-Steroidal Anti-Inflammatory Agents
The Development of Ibuprofen
The Mechanism of Action of Aspirin
Medicinal Uses of Prostaglandins
The Sterols and Steroid Hormones
The Biosynthesis of the Steroids
The Control of Cholesterol Biosynthesis
The Steroidal Anti-Inflammatory Agents
The Steroidal Oral Contraceptives
The Role of Nitric Oxide
Anti-infective Agents
Aims
Introduction
Bacterial Diseases
Antiseptics
The Sulfonamide Anti-Bacterial Agents
The Penicillins
Clavulanic Acid and the Inhibition of b-Lactamases
