List of principal contributors

Foreword p. 1
Early markers of idiopathic parkinsonism p. 3
Quantitative methods of evaluating Parkinson's disease p. 13
Etiology of Parkinson's disease p. 33
The pathogenesis of Parkinson's disease p. 59
Molecular biology of dopamine receptors: clinical implications p. 77
Adverse effects of levodopa p. 89
Aspects of levodopa pharmacokinetics and pharmacodynamics: bases of the modification of drug response during chronic treatment of Parkinson's disease p. 113

Dopamine agonists: historical perspective p. 139
Dopaminergic agonists in the treatment of Parkinson's disease p. 157
Neural grafting for Parkinson's disease p. 175
Protective therapy for Parkinson's disease p. 225
Current roles and future applications of trophic factors p. 257
Designing clinical trials in Parkinson's disease p. 275
Thoughts on Parkinson's disease p. 295
Index p. 301
