Observation of propagating elastic waves in granular soils by the pulse transmission method

Application of a spectral element method to wave propagation in multiphase porous media

Rate of earthquake-induced settlement of level ground

Using explosives to simulate earthquakes in a centrifuge

The vulnerability concept revisited

An integrated earthquake damage and loss methodology through GIS

Prediction of global damage and reliability based upon sequential identification and updating of RC structures subject to earthquakes

A simple method for estimating the maximum softening damage index

Passive control techniques in earthquake engineering

Analytical formulation of fragilities

Assessing damage for Herkenbosch, The Netherlands, due to the Roermond earthquake of April 13, 1992

Evaluation of dynamic site response for seismic design of pipelines

Stability of a coal longwall

Laboratory identification of the quality factor Q: comparative presentation and evaluation of spectral ratio and rise time methods

Seismic analysis of 3D subway tunnels

Seismic coefficients for steep slopes

Reservoir-dam-soil interaction: a comparative study

Seismic response analysis of pile foundations

A new method for dynamic analysis of pile groups

Nonlinear seismic response of single piles

Dynamic soil-structure interaction for non-axisymmetrical foundations

Comparison of experimental and dynamic analysis results for soil structure interaction problems

Discrete model for foundation-soil-foundation interaction

Structural vibration isolation by rows of piles

Analysis of machine foundations on undrained (incompressible) soils

Dynamical analysis of planar frame-wall systems on pile groups

A prediction method for the installation of vibratory driven piles

Geotechnical aspect of the Hokkaido-toho-oki earthquake of October 4, 1994

Traffic-induced vibration in buildings - use of site cut-off frequency as a remedial measure

Shaking table tests of gravity retaining walls

The influence of soil-structure interaction on the overall damping of structures with high damping

The response of framed structures on elastic foundations to ground motion

Seismic behavior of nonstructural components: window glass panels

Results of traffic and ambient vibration testing of bridges

Correlation analysis of non-stationary vibrations of a large system excited by seismic process
Nonlinear behavior of reinforced concrete structures in relation with seismic acceleration parameters p. 615

Preliminary investigation of using transformed damping coefficients in time domain analysis p. 623

Seismic performance of the "Sacro Convento di Assisi - Palazzo Papale" associated with static losses: a static and dynamic monitoring system p. 635

A hierarchy of numerical models for SSI analysis of buried pipelines p. 643

Properties and technology of the crushed brick mortars of Hagia Sophia p. 651

Authors' index p. 663
