Simulation supported design of LIGA microsystems p. 3
Overview of the CAEMENS framework and optimization of MEMS using statistical optimal design of experiments p. 11
Experimental results on the behaviour of micromechanical structures made by the LIGA technique p. 19
A design system for kinetic micro mechanical components p. 29
Interdisciplinary aspects only for microsystem design p. 37
Design and simulation of silicon and metal microstructures p. 45
LIDO: mask verification for LIGA designs p. 53
From CAD through manufacturing to quality control of microstructures p. 61
Design and analysis of resonant gyroscope suitable for fabrication using the LIGA process p. 69
A hybrid actuator for articulated micro-grippers p. 79
A computer program for ellipsometric rough surface measurements p. 89
An architecture for process planning, analysis and simulation in microsystems technology p. 95
A design simulation system for microstructures p. 105
Coupled field calculations of a micromachined flow sensor with different finite element analysis programmes p. 113
Automated simulation and analysis of electrostatic micromotors p. 121
Simulation of microsystems using a behavioural hybrid simulator Alecis p. 129
Specific problems of FEM thermal simulations for microsystems p. 137
A new calculation method of thermal environment in microsystems and experimental verification p. 147
Fluid modelling in micro flow channels p. 155
3D coupled electro-mechanical simulations in microstructures p. 165
Modelling and simulation of microresonators with meander suspensions p. 175
On the simulation of subminiature condenser microphones using finite differences p. 185
A linear reluctance self-oscillating motor p. 193
Modular solution approach for simulation of coupled physical phenomena p. 201
Field simulation of the elevation force in a rotating electrostatic microactuator p. 211
An integrated design and simulation tool for [mu]-structures p. 219
Optimization problems of semiconductor gas sensors p. 227
Optimization of the electrode shapes of micromachined piezoelectric microphones to minimise the influence of in-plane stress on the S/N ratio p. 235
A knowledge based design and simulation tool for [mu]-systems p. 243
Modelling of metal alloy contacts to semiconductor substrate p. 251
A general CAD concept and design framework architecture for integrated microsystems p. 259
Comparison of electrical device representations of physical differential equations p. 267
An investigation of computer modelling for micro-injection moulding p. 275
Low temperature wafer bonding on silicon nitride p. 285
Development of an electrochemical microanalytical system: from specification to realization  
Simulation of encapsulation stress in a micromachined silicon membrane pump  
Modelling and simulation of an intelligent motion surface in MEMS  
Simulation tools for micro electro mechanical systems  
Simulation supported design of micromechanical sensors
