Numerical Green's function applied to fracture mechanics: 3-D implementation p. 3
Developments in the use of the dual boundary element method for the fracture analysis of plate bending problems p. 13
Dynamic fracture mechanics with crack edges contact interaction p. 23
Dynamic dual boundary element analysis for 3-D fracture mechanics p. 33
Failure analysis of gears using the boundary element method p. 43
Probability based computation of life expectancy of mechanical structures p. 51
Trends in the stochastic BEM p. 61
Inelastic analysis without cell by improved multiple-reciprocity BEM p. 73
Accurate evaluations of strongly singular domain integrals in non-linear BEM p. 85
A fully regulated direct boundary formulation for three-dimensional elastoplastic problems p. 95
Homogenization of grain structure p. 105
A comparison between non conforming node-to-point and weak approaches in contact problem by BEM p. 117
Adaptive solution of rolling contact using boundary element method p. 127
A method to compute the effect of groups of frictional bolts p. 137
BEM analysis of the contact problem in fibres debonded of a matrix. Effects of curing stresses p. 145
Time domain boundary element analysis of resistively loaded wire p. 157
The steady-state wave process in a piezoceramic medium with cavities (plane deformation) p. 167
Galerkin method in time domain BEM analysis p. 179
On time-dependent domain integral approximation using radial basis functions p. 189
Efficient domain calculation in direct boundary element method p. 203
The residual as an error estimator in the BEM p. 215
Constructing adaptive boundary elements for the Poisson-type nonlinear problem p. 227
An estimate of numerical errors by means of boundary integral equations p. 237
Regularizing transformation method for evaluation of singular and near-singular integrals p. 247
Parallel Laplace transform boundary element methods for diffusion problems p. 259
r-Adaptive boundary element method p. 269
A new error indicator based on stresses for adaptive meshing with Hermite boundary elements p. 279
Panel clustering for 3-D elastostatics using spherical harmonics p. 289
A BEM-formulation applied to the solution of nonlinear dynamic problems p. 299
A boundary-only BEM for linear and nonlinear problems p. 309
Application of finite-dimensional perturbation technique to boundary integral equations p. 321
Theory and practice of superconvergence based a posteriori error estimation in a Galerkin boundary element method p. 333
Green's functions in the numerical solution of some inverse boundary value problems p. 351
3-D impedance tomography of high contrast objects p. 361
An efficient inverse BEM algorithm to characterize space dependent thermal conductivity with an evolutionary-genetic approach p. 371
Integral formulation of non-steady convective diffusion problem with high source term value p. 383
An indirect boundary element method for slow viscous flow in a bounded region subject to surface tension forces p. 395
Parallel indirect multipole BEM analysis of Stokes flow in a multiply connected domain p. 407
An asymptotic boundary element method for the 2D Stokes problem in the vorticity formulation p. 419
Rayleigh Benard convection of non-Newtonian fluid p. 429
Leaky and confined aquifer flow analysis using 3D BEM p. 441
Unsteady free surface flow around hydrofoils p. 451
A comparison of different radial basis functions in DRBEM solution of the Navier-Stokes equations p. 461
Emergence of nonlinear dynamics in 3D cavity mixing of Newtonian and viscoelastic (linear) fluids p. 471
Estimation of physical unknowns in submerged breakwater using nonlinear least squares-boundary element method p. 483
The dual reciprocity method for Helmholtz-type operators p. 495
A generalized Helmholtz equation fundamental solution using a conformal mapping and dependent variable transformation p. 505
Boundary element analysis of certain structural-acoustic coupling problems and its application p. 511
Applications of a new composite BIE for 3-D acoustic problems p. 521
Muffler analysis using the direct mixed-body boundary and an efficient four-pole approach p. 531
Application of boundary element methods in modeling multidimensional flame-acoustic interactions p. 541
Finite resistivity and shipboard corrosion prevention system performance p. 555
Boundary element model of electrochemical dissolution with geometric non-linearities p. 565
A general formulation based on the boundary element method for the analysis of grounded installations in layered soils p. 575
Determination of 3D time domain responses in latered media by using a coupled BE/FE process p. 587
Modeling of turbo-generator rotors using BEM p. 597
Boundary element dynamic non-linear stress analysis by mass matrix approach p. 607
The boundary element method applied to transient dynamic anistropic problems p. 617
Transient conduction-radiation problems: dual reciprocity solution p. 627
Improvement of the frit salvage process for a cathode ray tube p. 637
Extension of the dual reciprocity boundary element method to the problems of phase-change and thermal wave propagation p. 649
Boundary integral formulation for non-linear conduction in anistropic heterogeneous media p. 659
Boundary element analysis of conduction problems p. 669
FVM/BEM approach for the solution of non-linear conjugate heat transfer problems p. 679
