Information systems
Advanced decision support: improving control room effectiveness p. 3
Transport and infrastructure knowledge decomposition with reference models p. 15
General structure of an inter-mode public transport information system based on Web technology p. 25
Administrative support systems in road safety: the case of the Greek penalty point system p. 31
Feedback from a database created for reporting accidents in tunnels and galleries p. 41

Integrated transport and land use
Urban land use changes and ICT-based innovation of public transport p. 53
Public transport developments in integrated transport and land use planning in the three largest Australian cities p. 63
Sustainable transport policies in Japanese cities: barriers to implementation p. 73
Washington, D.C./Richmond Rail corridor: community development strategies p. 83
The alignment between integrated transport plans and the preparation of integrated development plans in South Africa p. 93
Public transport in the sustainable urban transport policy p. 103
Cube Land--integration between land use and transportation p. 111

Transport demand management
Trip generation: comparison of neural networks and regression models p. 121
Demand considerations in locating transportation facilities: a case of highway alignments p. 131

Transport modelling and simulation
Transims--the next generation planning/simulation model p. 143
LPT: a successful choice for the future p. 153
A transit network design model for urban areas p. 163
Daily flow profiles of urban traffic p. 173
Urban traffic model for simulators p. 183
A conceptual LUTI model based on neural networks p. 193
An agent-based architecture for urban transportation systems p. 203
Improving on the initial solution heuristic for the Vehicle Routing Problem with multiple constraints p. 217
A multi-agent model for the Vehicle Routing Problem with Time Windows p. 227
A modelling of route choice behaviour in transportation networks: an approach from reinforcement learning p. 235
Modal choice models estimation using mixed Revealed and Stated Preferences data p. 245
Explaining the suspect behaviour of travel demand forecasters p. 255
Present and future trips analysis in Ahvaz city p. 265
A distribution regional freight demand model p. 275
Planning fundamental urban traffic changes: experiences with the Groningen traffic circulation scheme p. 287

Urban transport systems
Benchmarking a future transportation system: a simulation library for the S.A.T. Project p. 299
The combined zone and fare planning problem p. 311
Integrating a modern light rail transit (LRT) system into an historic city centre p. 321

Logan Square: restored access and revived prominence p. 333
Public transport provision in Ahmedabad, India: accessibility to work place p. 343
An analysis of Ahvaz bus services system and its place in urban transportation, as well as the role it plays in reducing the traffic congestion within the central core of the city p. 355

Policy sensitivity analysis of Karachi commuters p. 365
A new methodology for allocating road space for public transport priority p. 375
Evaluation of bus lanes in central urban areas through the use of modelling techniques p. 389

Urban transport system monitoring: the “black points” problem p. 399
A location model for pedestrian crossings in arterial streets p. 407
Transit for small urban areas p. 413
Advanced transport systems

Potential network effects of Intelligent Speed Adaptation p. 423
Intelligent Speed Adaptation (ISA) in Ghent, Belgium: the first European trial with politicians, academics and car-constructors as role models in ISA-driving p. 433

User choices regarding vehicle-driving automation p. 443
Evaluation of fog-detection and advisory-speed system p. 457
e-PARKING: an e-business platform for more efficient use of parking space resources p. 465

Infrastructure and maintenance
Method to reconstruct urban transport facilities p. 479
Alignment design for Citybanan in Stockholm p. 489
Transport technology
Future trends and driving forces in transport and logistics p. 501
Changing direction - rethinking urban bus design to attract the 21st century passenger p. 511

Development of the gauge change EMU train system in Japan p. 521
A new method of transportation in Mongolia: Wing-In-Surface-Effect Craft p. 531
Some results on the used lubricants analysis of urban bus diesel engines p. 541
Energy systems
Intermodal transport system and energy storage system for global warming prevention p. 553

Evolution of external costs in road transportation: from traditional vehicles to fuel cell vehicles p. 563
Improvements of energy efficiency of urban rapid rail systems p. 573
Sensitivity in the operation of conventional and alternatively fuelled Public Service Vehicles on Merseyside p. 583
Fuel cells in a medium-sized city in the year 2020 p. 593
An evaluation of future energy conversion systems including fuel cell p. 607
Preliminary assessment of a fuel cell public transport system for a medium-sized city in the year 2020 p. 617
Fast inductive recharge for public transport on medium dimension electric buses: the first experience in Genoa p. 627
Fuel consumption and CO\(^2\)-rates for inland vessels p. 637
Transport control and safety
Fashioning one-way urban road network design as a Module Orientation Problem p. 649
Development and application of level of safety for pedestrians on local streets p. 659
Safety diagnostic method in urban circular intersections p. 669
Statistical analysis of accidents in urban and rural roads in Khuzistan province p. 681
Optimization of signal timing transition period p. 689
Environmental impact
The differentiated correction of charge for air pollution p. 701
An applied test to evaluate the use of fluid dynamic code as a predictive key of air pollution from urban road traffic p. 707
Environmental pollution and tradable transportation rights in Europe p. 717
Exposure to ultrafine particles from traffic in city streets and the urban atmosphere p. 731
Air pollution and road traffic in Kuwait p. 741
Energy and pollution control opportunities for Lahore p. 751
Analysis of gross polluter cutpoints based on in-use vehicle inspection and maintenance test data in California p. 761
Transport, environment and health in Australia p. 773
Integration of a road traffic noise model (ASJ) and traffic simulation (AVENUE) for a built-up area p. 783
Traffic noise prediction model at gradients of the highway p. 795
An innovative study of noise and atmospheric pollution emission by urban vehicular traffic p. 801
The use of statistical analysis techniques in the study of urban vehicular traffic noise p. 811
Impact of roads on the landscape of a suburban area p. 821
Reducing Urban Pollution Exposure from Road Transport (RUPERT) p. 829
Diesel particulate matter: risk management strategies for the transportation planning process p. 839
Urban air pollution: input from car parking places p. 851
Economic and social impact
Is rail traffic useful or necessary for regional development? p. 863
Economic and regeneration impacts of Croydon Tramlink p. 873
Traffic pricing
Socio-economic and commute characteristics of drivers in electronic toll collection and variable pricing programs p. 885
Road pricing and urban freight transport: practices and developments from the BESTUFS project p. 895
The optimal cost allocation for urban transport management p. 905
Author Index p. 915
