A study on seismic vulnerability of Inca constructions
Seismic hazard simulation and risk reduction training algorithm for the city of Patras, Greece
Incremental factor in design parameters for important structures
Hazard assessment in dynamic slope stability analysis
Application of risk density analysis for seismic design: a gravity-type quay wall case
Vulnerability assessment of RC structures using fuzzy logic
The interdisciplinary activity for seismic risk analysis in a Mediterranean city
Near fault earthquake scenarios for the February 20, 1818 M=6.2 'Catanese' event
The site response in the city of Ragusa-Ibla (Sicily) by using microtremors and strong ground motion simulations
Evaluation of the local seismic response in the area of Catania (Italy)
Earthquake-triggered landslide hazards in the Catania area
A seismic network reliability evaluation on a GIS environment - a case study on Catania province
Numerical analysis of buried pipes subjected to lateral soil movements
Numerical modeling to determine risk scenarios in an alpine alluvial fan
Geomorphologic hazard and risk in Platani's basin: landslide risk valuation
Combining geomorphological, historical and lichenometrical data for assessment of risk due to present-day slope processes, a case study from the Icelandic Westfjords
Determination of the damage potential: a contribution to the analysis of avalanche risk
Multi-hazard analysis in natural risk assessments
Territory-wide predictions of mortality in landslide disasters
Evaluation of landslide hazard and risk in north-eastern Italy
The role of monitoring of the triggering factors in the risk management of a landslide: the Cassas example
Susceptibility assessment of an area subject to a large landslide: the case of San Martino sulla Marrucina (Chieti province - central Italy)
Regional analysis of superficial slope instability risk in Calabria (Italy) through a pluviometrical approach
Experimental and numerical analysis of impact forces on structures due to a granular flow
Modern methodologies for deformation measurements and landslide movement control
A software approach to spatial predictions of natural hazards and consequent risks
Decompositional analysis of unobserved trigger factors of slope failures based on structural equation modeling
Statistical landslide prediction map as a basis for a risk map
Sea level rise scenarios induced by climate change, and their consequences for the Estonian seacoast
The Jubaguerra stream event: analysis of a mass movement connected with a flash flood phenomenon and its application to other areas in the Gredos Mountains (Central Spain)
Strengthening local authorities in flood risk management: a case study from Naga, the Philippines p. 359
Floods and droughts in Mozambique - the paradoxical need of strategies for mitigation and coping with uncertainty p. 371
Safety assessment for disposal of hazardous waste in abandoned underground mines p. 383
Site specific health risk assessment - a case study for hydrocarbon contaminated soils p. 393
Modeling current traffic load, safety evaluation and SFE analysis of four bridges in China p. 403
Noise assessment in a thermal plant development project in Kuwait p. 415
General models of ship risk during port manoeuvres p. 425
Determination of maximal ship safe conditions for entrance to the ports p. 435
Contaminated well water: a risk factor for helicobacter pylori infection p. 445
The Sioux Falls brownfields project: analysis of project issues and tools used p. 455
Updated oil spill risk assessment for the Gulf of Suez p. 463
Territorial information system interoperability: a design improving interaction in an emergency p. 475
Approaching the analysis of transport networks in emergency conditions for the design of evacuation plans p. 485
Iterative estimation of reliability parameters using the Bayesian approach p. 497
Characteristic value determination for arbitrary distribution p. 503
Some aspects on uncertainty and reliability in geotechnical engineering p. 515
Uncertainties and fuzziness in analysing risk related to natural hazards: a case study in the Ortles Alps, South Tyrol, Italy p. 523
Empirical estimate of vulnerability relations for use in snow avalanche risk assessment p. 533
Risk analysis of natural gas pipeline p. 543
Risk analysis of the Kaunas hydropower system p. 553
Risks of large infrastructure investments: the case of Kathmandu p. 563
Reliability analysis of the electricity transmission system in Lithuania p. 573
Balanced scorecard method for predicting the probability of a terrorist attack p. 581
Human health risk profiles for sewage discharges p. 593
Estimation of environmental risk in construction projects in Puebla (Mexico): a neural network approach p. 603
Mapping forest fire risk zones based on historical fire data in Mount Olympus, Greece, using geographical information systems p. 613
A benchmark of two different simulation models for air quality evaluation in a complex industrial area p. 629
Small-scale experiments on soil roughness evolution and first applications to soil erosion risk assessment p. 639
An integrative model of natural hazard risk evaluation p. 649
Addressing the problem of limited resources in risk management p. 659
Multi-step matrix game with the risk of ship collision p. 669
Assessment of catastrophic wave impact in Apulia region (Southern Italy) p. 681
Structural models and the prediction of default probabilities p. 691
Improving the most general methodology to create a valid correlation matrix  p. 701
The importance of pre mitigation strategies in development planning  p. 713
Remote sensing imagery for damage assessment of buildings after destructive seismic events  p. 725
Simulation-based risk analysis in production networks  p. 735
Territorial vulnerability analysis : the environmental risk management systems  p. 747
Territorial vulnerability analysis : the methodological framework  p. 753
Technological risks management : automatic detection and identification of hazardous material transportation trucks  p. 763
The security telecommunication system of the Vatican City State  p. 773
Territorial vulnerability analysis : the case studies  p. 783
The role of computer simulation programs for marine engineers in hazard prevention by reducing the risk of human error in the operation of marine machinery  p. 791
Integration of safety studies into a detailed design phrase for a navy ship  p. 799
