Fracture mechanics and fatigue

Fully automatic 3D crack growth with BEM p. 3
Fracture aspects of cylindrical structures p. 13
The stress analysis of frictional punch with crack in plane elasticity using boundary element method p. 23
Mechanical and thermal crack initiation along the seal edge of cathode ray tube p. 35

Elastic and inelastic problems

Thermo-elastoplastic analysis without cells by triple-reciprocity BEM p. 51
BEM formulations applied to gradient plasticity p. 61
A new formulation for the efficient computation of stresses and error indicators in thermoelastic problems p. 71
Boundary element solution for the Cauchy problem in linear elasticity p. 83
CVBEM for antiplane stress analysis in an elastic body with spatially varying shear modulus p. 93

Elastic inclusion problems

Determination of polar moment of inertia and stress concentration of shafts under torsion load with arbitrary cross section p. 109
A multi-variable non-singular BEM in elasticity p. 117

Numerical and computational techniques

Semi-analytical integration for triangular elements used in the BEM p. 129
Extrapolating the number of segments to infinity in the Boundary Element Method p. 139
Fundamentals of the hybrid displacement boundary element method p. 145
Two-dimensional potential problems: accuracy through advanced integration algorithms and C[superscript 1] continuous boundary elements p. 155
Reformulation of matrix-type multiple reciprocity method for strong absorption domain in nuclear criticality system p. 165
High performance computing on boundary element simulations p. 175
Numerical modelling of grounding systems in high-performance parallel computers p. 181
A more accurate Green element method in two and three spatial dimensions p. 191

Inverse problems

Direct method of solution for general boundary value problem of the Laplace equation p. 203
Two iterative boundary element methods for inverse Cauchy problems p. 211
Solution of an inverse Stokes problem using interior data p. 221

Heat transfer

Temperature conduction across double brick walls via BEM p. 233
The influence of thermophysical properties of steels on the numerical simulation of a concasting process p. 243
BEM Fourier series algorithms for the numerical solution of Stefan problems p. 253

Fluid mechanics

Simulation of gas-solid particle flow p. 265
Experimental results and boundary element analysis of incident waves against submerged breakwaters p. 275
A comparison velocity and potential based boundary element methods for the analysis of steady 2D flow around foils p. 283
A new approach for the BEM solutions of heat conduction problems  p. 295
Indirect BEM formulation for Stokes flow mixed boundary value problems  p. 305
Composite materials
Development in boundary element applications to polymer analysis  p. 319
The analog equation method for large deflection analysis of heterogeneous anisotropic membranes: a boundary-only solution  p. 329
The BEM formulation of statistically distributed fibers in composites  p. 339
Plates and shells
Stress analysis of plates on 2 parameter elastic foundation using a non-singular fundamental solution  p. 351
New boundary integral equation method formulation for plate bending problems  p. 363
A study about fundamental solutions in plates  p. 373
Geomechanics
Dynamic problems of incompressible media  p. 385
The BEM formulation of distinct element method  p. 395
Electrostatics and electromagnetics
A new BEM technique for nonlinear 2-D magnetostatics  p. 407
Boundary element modeling of arbitrary thin wires configuration  p. 417
Bi-cubic spline functions in BEM computations of elastostatic HV-fields  p. 429
Fundamental principles
Singularities in meshless implementation of the local BIE  p. 441
Application of the BIE with hypersingular integrals in fracture mechanics  p. 451
Application of Trefftz-type boundary element method to sloshing analysis  p. 461
A modified boundary integral solution of coupled linear and nonlinear one-dimensional transport equations  p. 471
Some developments of the natural boundary element method  p. 481
Wave propagation problems
Green's function for point source with general time variation in 2-D scalar wave propagation analysis  p. 493
FEM/BEM coupling for fluid-structure interaction including nonlinear effects  p. 501
The propagation of waves surrounded by 3D blast sources around a cavity buried in a half-space  p. 511
Acoustics
The scattering of 3D sound sources by rigid barriers in the vicinity of tall buildings  p. 523
The scattering of 3D waves by a rigid pipeline submerged in a waveguide channel  p. 533
BEM analysis of exhaust network systems using the impedance matrix synthesis  p. 543
Dual reciprocity method and basis functions
The dual reciprocity method using multilevel compactly supported radial basis functions  p. 555
A dual reciprocity boundary element method for dynamic coupled anistropic thermoelasticity  p. 565
Derivative computation in the dual reciprocity method  p. 579
An easier DRM formulation for some problems  p. 589
Mesh refinement for the dual reciprocity method using local error analysis  p. 599
Numerical solution of non-Newtonian problems by the multi-domain dual reciprocity method  p. 613
Author index  p. 625
