Advanced Train Control Systems
Satellite based train control p. 3
Moving block and traffic management in railway applications: the EU project COMBINE p. 11
Positive train control initiatives in North America: technological and institutional issues p. 21
Test sites for the new Dutch rail system BB21 p. 33
Simulation test tool for validation of speed and distance on-board component of the European Train Control System p. 43
New York City Transit's pilot project for communications-based train control p. 53
Infrastructure
Correction of railway track geometric irregularities p. 65
A complete digital inertial measurement system for railway track geometry p. 75
Theoretical analyses of measurement of stress-free temperature in continuous welded rail p. 85
The effect of shifting errors when correcting track irregularities with a heavy tamping machine p. 95
Track irregularity measurement using an INS-GPS integration technique p. 105
Systems Engineering and Safety
Test case generation from formal specifications on the example of train control systems p. 117
Process optimisation in the engineering of safety-systems p. 127
Fault injection for quantitative safety validation of software based reactive systems p. 135
Safety principles of SIMIS interlocking systems p. 145
The model railway--an integrated approach to system design and simulation p. 157
Application of a system engineering tool to high speed railway system development project p. 171
ABS: A CASE tool for real time systems design p. 181
Validation and verification of METEOR safety software p. 189
Planning
An access rights database and validator p. 203
Introduction of a new high speed line in a high density traffic area: a simulation exercise p. 211
CAPRES network capacity assessment for Swiss North-South rail freight traffic p. 221
Use of Operations Research to facilitate and improve railway planning p. 231
A train traffic operation and planning simulator p. 241
RailSys, a system to plan future railway needs p. 249
Advanced railway planning using (max, +) algebra p. 257
Train network simulator for support of network wide planning of infrastructure and timetables p. 267
Electromagnetic Compatibility
A TLM approach for the modelling of high and low frequency EMC problems in power systems p. 279
Development and safety certification of DSP--based line current interference monitor for rail vehicles  p. 293
Integration of time-domain simulation models for vehicles and components  p. 303
Information technology for electrical system compatibility and interoperability problems on the European railway network  p. 313
Railway EMC environment and measurement  p. 323
Computer analysis of interaction between AC and DC electric traction lines in Italy  p. 333
Computer based data acquisition system for EMC experimentation in Italian Railways  p. 345
Interference assessment: Comparison of reed track circuit computer model and DFT based analysis  p. 357
A graphics-based simulator for audio frequency track circuits  p. 367
Scheduling and Crew Rostering
SIMON/RTT running time calculations  p. 379
Software for export of train running times from BIS via SIMON/RTT to Trainplan  p. 387
Semi-demand operation of intercity railway transportation  p. 395
PETER, a performance evaluator for railway timetables  p. 405
Rail service on triple-track lines: proposal and benefits  p. 415
Computer-aided train operation: CATO  p. 425
Freight Traffic and Passenger Interface
Depot shunting scheduling using combined genetic algorithm and PERT  p. 437
Simulation support for railway infrastructure design and planning processes  p. 447
Modelling and simulation of marshalling yard operation providing semi-continuous speed control  p. 457
Development of reserved seat information system for Shinkansen  p. 465
Trial manufacture of sales supporting system using mobile agent technology  p. 475
Contactless ticketing: state-of-the-art and user impact  p. 485
A passenger's choice model of train service  p. 495
Energy Management and Power Supply
Coefficient of regenerative energy for commuter and light-traffic railways  p. 507
Train scheduling and energy saving with pure electric braking and semi-automatic train operation  p. 517
First characteristic harmonic component of output ripple on dc railway rectifiers  p. 527
A tool to calculate mechanical forces on railway catenary  p. 535
Contact wire breakage for aluminium wire in compression sleeve  p. 545
Analysis of AC traction power supplies using the SIMSPOG simulation tool  p. 555
Development of a regenerative 3 kV dc traction substation with active power filter capability  p. 567
Unbalance and harmonic distortion on AC traction systems: a statistical approach  p. 577
New prospectives for digital protections of the 3 kV DC electric traction lines  p. 587
Modelling and verification of simulation results in computer aided analysis of electric traction systems  p. 599
Traction and Maglev and Linear Mechanics

Design of on-board computer system for Korean High-Speed Train p. 933

A vision based system for pantograph and catenary monitoring p. 943

Multi-Train Simulators

An integral calculation method for train movement p. 955

Multi-train simulation: verification and accuracy p. 965

Carrying capacity of railway networks: interaction of line and node models p. 977

Discrete-event simulation of railway systems with hybrid models p. 987

Railway lines operation simulator: GifTren p. 997

Multi-train simulator for regulation purposes p. 1007

Training, Decision Support and Human Interface Systems

Empirical study of a railway traffic management constraint programming model p. 1017

Geographic train position information system p. 1027

Trace process supervisor training system p. 1037

Railway safety and the train driver information environment p. 1047

Automatic conflict detection and decision support for optimal usage of railway infrastructure p. 1057

Driving techniques and strategies for freight trains p. 1065

Control Systems and Communication

Assessment of mass transit turn-back capacity using dynamic simulation models p. 1077

A simulation environment to reduce the development cost of an automatic train operation system p. 1087

An interbus for on-board train control equipment on the CAN bus p. 1099

On-line data gathering using GSM short messages p. 1107

Reliability verification of train control algorithm for Korean high-speed train p. 1117

Design and construction aid system for traffic protection equipment on railway level crossings p. 1127

Fail-safe LAN for train control systems p. 1135

Simulation study of moving automatic block system based on MATRIXx 6.0 p. 1145

Intelligent railway signaling system in the 21st century p. 1155

Development of integrated automatic train stop with patterns (ATS-P) on-board system p. 1165

Re-engineering a signal control system p. 1177

ATP equipment using system administrator p. 1185

New train control system of Tokaido Shinkansen p. 1195

System for tramway priority at traffic lights p. 1205

Train Location Systems

Train positioning via integration and fusion of GPS and inertial sensors p. 1217

GPS/GNSS based train position locator for railway signalling p. 1227

SATNAB--validation of a satellite based ground navigation system p. 1243

Train-based location by detecting rail switches p. 1251

Eddy current sensor system for non-contact speed and distance measurement of rail vehicles p. 1261
