Holographic interferometry as a velocimetry technique in gaseous flow
A depth-from-defocus for small particles distributed in three-dimensional space
Mapping three-dimensional velocity and vorticity fields in a developing turbulent spot using a three-component LDA
Time-recording scanning-particle-image-velocimetry (SPIV) technique for the study of bubble-wake interaction in bubbly two-phase flows
The time-resolved visualization of first and second derivatives of turbulent velocity field
Volumetric three-dimensional flow measurement in IC engines using holographic recording and optical correlation analysis
Velocity measurement in low turbulence natural convection using two-dimensional LDA with BSA
Effects of refractive index changes on laser Doppler anemometry
Acousto-optic effect on laser Doppler anemometry signals
Optical measurement and data manipulation of droplet size distribution in two-phase flashing propane jets
Development of laser sheet drop sizing (LSD) for spray characterization
Optical diagnostics and direct injection of liquid fuel sprays
Average heat transfer measurements near a sharp 180 degree turn channel for different aspect ratios
Non-intrusive temperature measurement in sub-sonic condensing flows
Application of an infra-red thermal imager to investigate heat transfer characteristics of film cooling slots with up-and-downstream facing steps
A new scheme for fringe analysis in mass transfer experiments
A study of unsteady wake-induced boundary-layer transition with thermochromic liquid crystals
The study of special gasdynamic features of the flow in a diameter disk pump by means of liquid crystal thermography
A study of local heat transfer coefficients in plate fin-tube heat exchangers using the steady state and transient liquid crystal techniques
Application of LCT and PIV for investigation of wavy processes in fluids
Visualization of transient waves in air by tomography and pulsed TV holography
Tracer-based shock visualization in the blade passage of the rotor of a transonic axial compressor
Velocity and turbulence measurements in a vented duct rig using particle image velocimetry, for validation of gas explosion model predictions
Experimental measurements of the scattered-light polarization from different liquid flows
Experimental study of water droplet boiling on hot, nonporous surfaces using infrared thermography
Optical fibre aerodynamic probes for temperature and pressure measurement
Application of virtual reality to the visualization of complex flows
Measurement of cross-flow characteristics from a transient water model of a thin slab casting mould
Extracting high-precision information from CCD images
The measurement of a free air jet using particle image velocimetry (PIV) and laser Doppler anemometry (LDA)
Investigations in the mixing process of fuel and water in the flame tube of a gas turbine

The application of particle image velocimetry (PIV) and flow visualization to the coolant flow through an automotive engine

The instantaneous determination of a transonic stator wake and turbulent burst in a low-speed boundary layer in air using particle image velocimetry (PIV)

Application of PIV to the flow inside a car cabin

A high-spatial resolution and large dynamic range cross-correlation PIV technique for turbulent flow measurements

The development of phosphorescent particle tracking (PPT) to visualize the interaction of gas flow streams within the cylinder of an IC engine

Laser-induced fluorescence measurements of the effect of breaking waves on a density interface

An LIF line scan system for the measurement of scalar concentration in a continuously operated stirred tank agitated with a Rushton turbine and a ‘bucket’ impeller

Gas flow structure reconstruction using an impulse discharge visualizing method

Interferometric tomography measurement of the temperature field in the vicinity of a dendritic crystal growing from a super-cooled melt

Statistical analysis of turbulence by speckle photography

Holographic interferometric tomography for the study of unsteady compressible flows

Experimental investigation of micro- and macro-mixing with the tomographical absorption spectroscopy

A fast laser-tomography system for flow analyses

Optical processing in tomography of nerve fibres

Multi-colour laser light sheet tomography (MLT) for recording and evaluation of three-dimensional turbulent flow structures

Reconstruction of heat-transfer coefficient distribution from multi-directional Schlieren data

Visualization of wave propagation in a three-pipe junction

Optical investigation of complex sound and flow fields behind detonation waves in gas mixtures

Influence of a Gaussian beam scattering peculiarity on accuracy of optical methods

The research on oscillations of gas bubbles in an underwater ultrasonic field
