Structures, Crashworthiness, and Compatibility
C567/011/2000 Compatibility—the essential requirements for cars in frontal impact p. 3
C567/060/2000 Load-cell barrier measurements of geometric compatibility p. 19
C567/036/2000 Vehicle compatibility analysis using casualty data p. 29
C567/047/2000 An optimization methodology for improving car-to-car compatibility p. 45
C567/059/2000 Crash compatibility of passenger cars achievable, but how? p. 55
Pedestrian Protection
C567/014/2000 Development of a pedestrian model for reviewing the EEVC WG10 upper leg form test energies p. 69
C567/016/2000 A numerical analysis of the car front end module regarding pedestrian lower limb safety p. 79
C567/023/2000 An approach to improve vehicle-front design for pedestrian protection using mathematical models p. 93
C567/031/2000 Comparison of pedestrian accident reconstruction models to experimental test data for wrap trajectories p. 107
C567/032/2000 Effect of pedestrian protection on styling and engineering of vehicles p. 123
C567/038/2000 Pedestrian protection potential of a polymeric sandwich bonnet p. 137
Regulations and Consumer Information
C567/008/2000 Road safety in less motorized countries—relevance of international vehicle and highway safety standards p. 155
C567/042/2000 Review of the frontal and side impact directives p. 167
C567/056/2000 Biofidelity of dummy legs for use in legislative car crash testing p. 183
Crashes, Injury, and Biomechanics
C567/053/2000 The statistical accuracy of delta-V in systematic field accident studies p. 201
C567/044/2000 Emergency steering in fatal and serious injury, sport utility vehicle rollover crashes p. 219
C567/006/2000 Accident research with regard to crashworthiness and crash avoidance p. 235
C567/012/2000 A practical model for prediction of spinal kinematics and injury p. 251
C567/039/2000 Injury as a function of change of velocity—an alternative method to derive risk functions p. 263
C567/050/2000 The feasibility of using police reports to gather in-depth injury information for road safety research p. 275
Restraint, Design, and Performance
C567/046/2000 Comparison of two-point ISOFix dynamic test performance on the ECE R44 test bench and car rear seats p. 297
C567/028/2000 Injuries of moderate severity to restrained drivers in frontal crashes p. 313
C567/035/2000 Pressure-controlled venting holes in airbags: another step on the way toward increased system adaptivity p. 325
Authors’ Index p. 337
