Exploring the ocean's microbes: sequencing the seven seas p. 1
Don't know much about philosophy: the confusion over bio-ontologies p. 3
Biomedical informatics research network (BIRN): building a national collaboratory for biomedical and brain research p. 5
Protein network comparative genomics p. 7
Systems biology in two dimensions: understanding and engineering membranes as dynamical systems p. 9
Bioinformatics at Microsoft research p. 11
Movie crunching in biological dynamic imaging p. 13
Engineering nucleic acid-based molecular sensors for probing and programming cellular systems p. 15
Reactome: a knowledgebase of biological pathways p. 17
Effective optimization algorithms for fragment-assembly based protein structure prediction p. 19
Transmembrane helix and topology prediction using hierarchical SVM classifiers and an alternating geometric scoring function p. 31
Protein fold recognition using the gradient boost algorithm p. 43
A graph-based automated NMR backbone resonance sequential assignment p. 55
A data-driven, systematic search algorithm for structure determination of denatured or disordered proteins p. 67
Multiple structure alignment by optimal RMSD implies that the average structure is a consensus p. 79
Identification of [alpha]-helices from low resolution protein density maps p. 89
Efficient annotation of non-coding RNA structures including pseudoknots via automated filters p. 99
Thermodynamic matchers: strengthening the significance of RNA folding energies p. 111
PEM: a general statistical approach for identifying differentially expressed genes in time-course cDNA microarray experiment without replicate p. 123
Efficient generalized matrix approximations for biomarker discovery and visualization in gene expression data p. 133
Efficient computation of minimum recombination with genotypes (not haplotypes) p. 145
Sorting genomes by translocations and deletions p. 157
Turning repeats to advantage: scaffolding genomic contigs using LTR retrotransposons p. 167
Whole genome composition distance for HIV-1 genotyping p. 179
Efficient recursive linking algorithm for computing the likelihood of an order of a large number of genetic markers p. 191
Optimal imperfect phylogeny reconstruction and haplotyping (IPPH) p. 199
Toward an algebraic understanding of haplotype inference by pure parsimony p. 211
Global correlation analysis between redundant probe sets using a large collection of arabidopsis ATH1 expression profiling data p. 223
Distance-based identification of structure motifs in proteins using constrained frequent subgraph mining p. 227
An improved Gibbs sampling method for motif discovery via sequence weighting p. 239
Detection of cleavage sites for HIV-1 protease in native proteins p. 249
A methodology for motif discovery employing iterated cluster re-assignment p. 257
