Introductory papers
Memorable moments in the structural optimization research  p. 3
Our research relating to the minimum cost design of welded structures  p. 11
Test and numerical verification of Ice-Hockey Hall  p. 19
Optimization of an orthogonally stiffened plate considering fatigue constraints  p. 27
Shape and composite layout design of multilayer composite structures using the Snyman-Fatti algorithm  p. 35
Stress analysis in the steel tank shell at its connection with the product pipeline  p. 43

Structural optimization I
Combined shape and size optimization of steel bridges  p. 53
Minimum cost design of a square box column composed from orthogonally stiffened welded steel plates  p. 61
Multicriteria tubular truss optimization  p. 71
Optimization of a steel frame for fire resistance with protection  p. 79
The MINLP approach to cost optimization of structures  p. 89
Finite element analysis and optimization of a car seat under impact loading  p. 97
Experimental testing of space framework jib of a crane  p. 105

Structural optimization II
Optimization of steel beams and columns for variable rib configuration  p. 113
Metamodels for optimum design of laser welded sandwich structures  p. 119
Optimal design of a composite cellular plate structure  p. 127
A simple function to estimate fabrication time for steel building rigid frames  p. 135
Topology, shape and standard sizing optimization of trusses using MINLP optimization approach  p. 143
The influence of dimensional accuracy on steel structures cost calculation  p. 151
Effects of residual stresses on optimum design of stiffened plates  p. 157

Fatigue design
Numerical fatigue analysis of welded orthotropic bridge decks  p. 167
Fatigue strength investigations of connections between primary ship structural components  p. 175
Structural stress concentration due to axial misalignment in monorail beam  p. 185
Estimation of the applicability of thin steel plate as sacrificial test piece  p. 193
Possibilities of predicting the fatigue life of resistance spot welded joints  p. 201
Fatigue behaviour of friction stir spot welded joints with re-filled probe hole in Al-Mg-Si alloy  p. 211
Applicability of different approaches for the fatigue assessment of welded components in vehicle construction  p. 219

Frames
Large displacement analysis of spatial frames under creep regime  p. 229
Plastic limit and shakedown analysis of elasto-plastic steel frames with semi-rigid connections  p. 237
Welded triangular haunch for the seismic improvement of steel beam-to-column connections  p. 245
Composite welded beam-to-column subassemblages reinforced with triangular and straight haunch p. 253
Calculation of the stiffness and resistance of minor axis and 3D connections p. 261
Hollow sections
A new yield line theory based design approach for ultimate capacity of welded RHS X-joints p. 271
Non-linear behaviour of concrete-filled welded steel box-section arches p. 279
Numerical simulation of buckling of metal tubes p. 287
Effect of longitudinal weld on residual stresses and strength of stainless steel hollow sections p. 293
Optimum design of trussed columns p. 301
Plated structures
Elastic flexural-torsional buckling of web-tapered fabricated cantilevers p. 311
Plate girders fabricated by single sided fillet weld: imperfections, tests, resistances p. 319
Determination of elastic constants of panels with structural orthotropy p. 327
The elastic-plastic local stability and load-carrying capacity of compressed thin-walled steel members p. 335
A user-friendly design of the webs of steel bridges subjected to many times repeated loading p. 343
Numerical model for buckling analysis of flexibly connected beam-type structures p. 353
Residual stresses and distortions
Repair by heating/pressing for locally buckled steel members p. 363
Estimation of welding distortions and straightening workload through a data mining analysis p. 371
Using of local-global welding virtual numerical simulation as the technical support for industrial applications p. 379
Determination of internal mechanical stresses of large steel structures on the basis of electromagnetic reading out of laser scribed marks p. 387
Calculation of welding residual stresses and distortions under complex process conditions p. 395
Static stresses in welded connections
Generalised beam theory to analyse fillet welded joints p. 405
Investigations of strength and ductility of welded high strength steel (HSS) connections p. 411
Stress state of welded joints p. 419
Finite element modelling of fillet weld connections p. 427
Application
Welding works on floodplain-bridge of Danube bridge at Dunaujvaros p. 437
Lessons from failures and design errors of thin-walled steel structures p. 445
Cost optimal design of composite floor trusses p. 451
Initial shape of cable-suspended roofs p. 459
Welding technology I
Study of the weld zone of friction welded C45/1.3344PM dissimilar steel joints p. 469
Solid wire vs. flux cored wire - comparing investigations for GMA-laser-hybrid welding p. 477

Precision joining of Al-Al Micron Foils by Improved Ultrasonic Friction Welding p. 485

Experiments and simulations of welded joints with post weld treatment p. 493

Welding technology II

Application of laser peening on welded rib-plate of mild steel p. 505

A new potential for welded structures in modified X2CrNiI2: characterization of dissimilar arc weld with S355 steel p. 511

Friction stir welding of T-joints fabricated with three parts p. 519

Economic benefit of upgrading the in-service inspection system of pressurized components at Paks Nuclear Power Plant p. 527

Applied mechanics

Analytical strength analysis of strands applied for high pressure hoses p. 536

Optimization of inelastic cylindrical shells with stiffeners p. 545

The result of developing and building of a many sheaves cable system analyzer machine and a sheave-wear machine p. 555

Safety factors in design of steel members for accidental fire situation p. 563

Analysis of random limit load and reliability of hyperstatic trusses p. 571

Author index p. 579
